# Kyber — Process Flow & Screen Spec

Every screen, state, interaction and animation in the phone prototype — now in the new Kyber look — documented for the SwiftUI build.

Phone prototype (kyber-phone.html) · 390 x 844 pt · 49 screenshots · replaces the Sep 22 orange edition

OVERVIEW

# How the app is put together

## WHAT THIS DOCUMENT IS

A walkthrough of the Kyber phone prototype in the order a new student meets it. Each step page shows the real screenshot(s) on the left. On the right it lists what's on the screen, what every tappable element does, how things animate, and where the student goes next. The appendix has the design tokens, motion timings, data model and the full mock data for each course. Hand the whole PDF to Alex (or a Swift AI tool) and rebuild each numbered step as a SwiftUI view.

## APP STRUCTURE

- **Phase 1: Onboarding (one time only).** Upload syllabi → Processing ("Reading your syllabi…") → Reveal ("Your semester appeared.") → main app. Save a **hasOnboarded** flag with @AppStorage so it runs once.
- **Phase 2: Main app.** A floating bottom tab bar with 3 tabs: **Courses** (book icon), **Now** (clock icon), **Plan** (calendar icon). After onboarding, the student lands on Courses.
- Detail screens (Reading guide, Summary, Week notes) are pushed full-screen with a back button at the top left, and the tab bar hides. Bottom sheets (Add to plan, class details, study block, Google Calendar) slide up over a dimmed backdrop.

## GLOBAL UI RULES

- The phone canvas is 390×844 with a cream background (#FFF9ED). Content scrolls under a pinned header. Horizontal padding is 22, top padding 30, and bottom padding 120 so the floating tab bar never covers content.
- Tab bar: floats 14 pt from the edges, white at 94% with a 10 pt blur, radius 24, warm shadow. The active tab gets a soft-amber pill (#FFF3D2) with an amber-deep label; inactive icons sit at 60%.
- Screen header: the app icon (40×40, radius 11), a Quicksand 21 title in charcoal and a 12.5 pt muted subtitle. The avatar circle sits on the right.
- Segmented controls: a pill track (#F6EBD3, 4 pt padding). The active segment is white with a soft shadow and charcoal bold text.
- All screens share one app state. Checking off a task anywhere shows up everywhere: the course card, the Now list, readiness and Plan.

## FLOW MAP

```
ONBOARDING (one-time)
Upload —tap dropzone→ files animate in (×5) → [Build my semester]
  → Processing (6 rows, 560 ms apart) —auto 4.6 s→ Reveal
  → [Show me my courses] → MAIN APP / Courses tab

COURSES   Semester 1 | Semester 2
Course card —tap→ expands inline (one open at a time)
  Today ring —tap→ ✓ done, readiness bar grows
  How is this calculated? → inline explainer
  Full plan ▾ / Grade calculator ▾ → inline disclosure

NOW
Up next [Start] → Reading guide → Summary → notes
  [Done — check it off] → back to Now, ✓, Up next advances
[I missed yesterday] → proposal —[Apply]→ plan adjusted (Undo)
Check-in chips → reply · [Add this week's notes] → Week notes

PLAN   Day | Week | Month      (+) → Add sheet → form
Day: study item → Summary · Lab → class sheet
Week: block → class sheet / study block sheet / Summary
Month: tap day → day peek · [Add to Google Calendar] → .ics
```

OVERVIEW

# What changed in this edition

## NEW LOOK

- The amber palette replaces the old orange #FF5A00: amber **#E9A319** for the one action per screen, amber-ink #8A5A06 for eyebrows and numbers, and a cream #FFF9ED background.
- **Quicksand** for headings and big numbers, and **Plus Jakarta Sans** for everything else. This matches the desktop web app.
- Primary buttons use charcoal text on amber (readable), not white.
- The app icon is the dark tile with the amber K and cap. Course colours now appear as dots and tints only, with no coloured card edges.
- No red anywhere. The "NEXT EXAM" pill is soft amber, not red.

## PRINCIPLES APPLIED

- **Explain every number**: the readiness bar has "How is this calculated?", and the reveal stats say what they count.
- **Support, never shame**: "I missed yesterday" now proposes the change first (Apply / Keep my plan), and readiness never goes down.
- The check-in asks "How does this week feel?" with the same four answers and replies as the desktop app.

## V1 QUIRKS FIXED

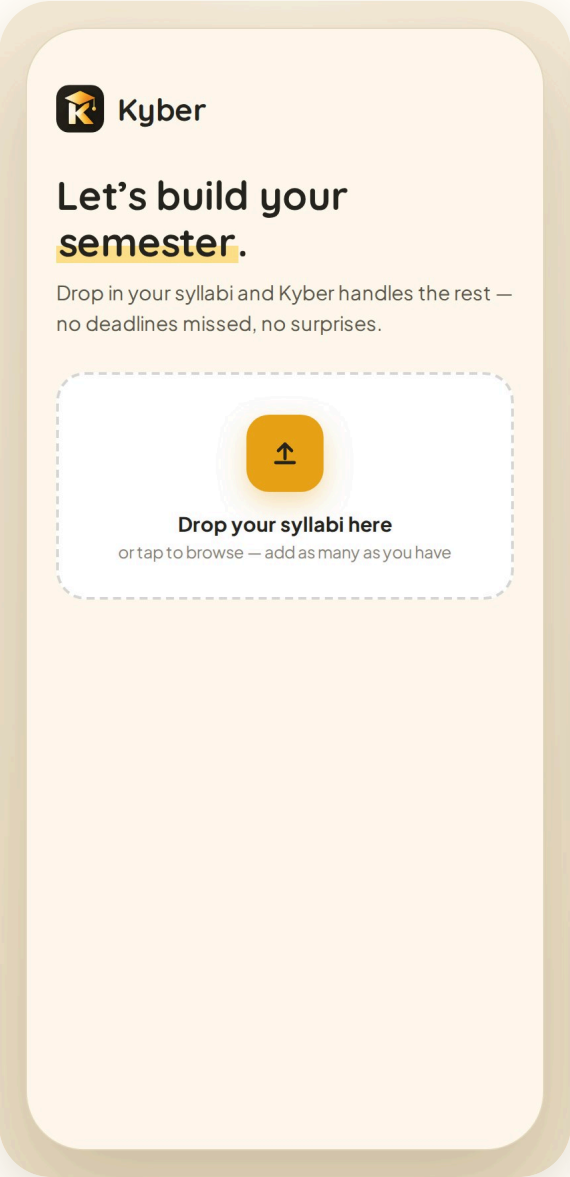

- One course set everywhere (PSYC, MATH, BIOL, ECON, PHIL). ENGL 101 and MUSC 105 are gone from onboarding and the check-in.
- The tab bar is hidden on every pushed screen.
- "Open course" expands and scrolls to the course.
- The Add sheet has a real form and the same 7 types as desktop.
- Semester 2 cards have "Add syllabus →", and PHIL 200 Ethics replaces the duplicate PHIL 100.
- Class sheets link the prep task ("Before this class").
- Week and Month arrows are defined as paging.

## STILL OPEN — DECIDE TOGETHER

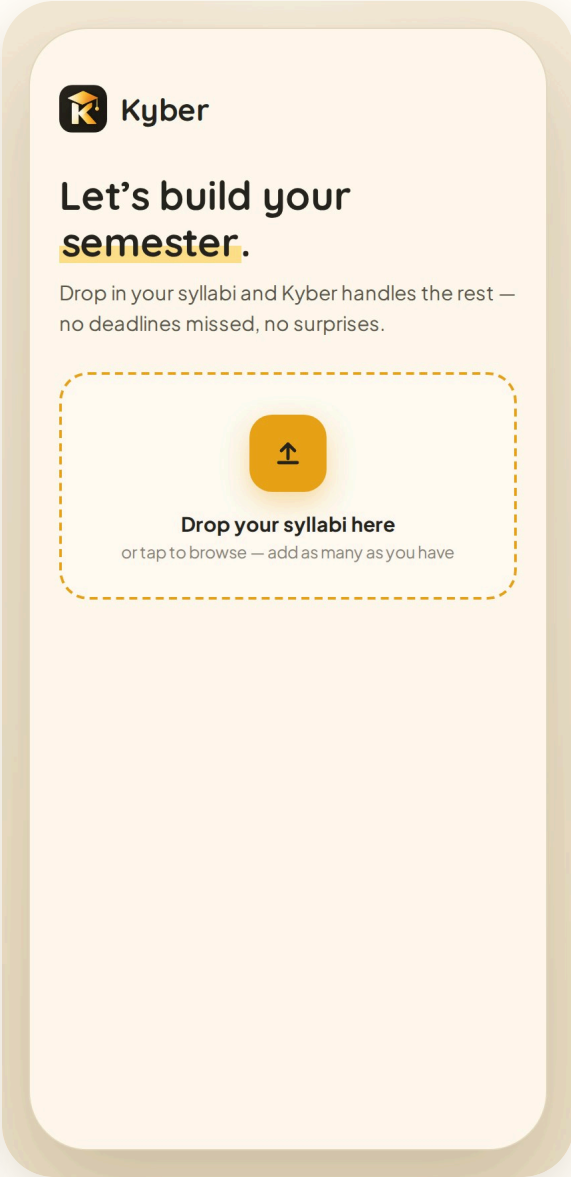

- The avatar "A" has no menu on the phone yet. The desktop app has Account, Preferences, Semester settings and Sign out.
- Day is the default Plan view on the phone; the desktop defaults to Week.
- The Kyber_Brand_Identity.docx in the project still lists the old orange palette. Update it to these tokens.

PHASE 1 — ONBOARDING (RUNS ONCE)

# 1 Upload — empty state

Default

Hover / pressed

## ON SCREEN

- Logo row: the Kyber app icon (36 pt, radius 10) and the wordmark **“Kyber”** in Quicksand 23 bold, charcoal.
- H1 in Quicksand 30 bold, charcoal: “Let’s build your **semester**.” The word “semester” has a soft-yellow highlighter band (#FFE08A) behind the lower half.
- Sub at 15 pt, line height 1.5, muted (#5E594E): “Drop in your syllabi and Kyber handles the rest — no deadlines missed, no surprises.”
- Dropzone card: white, 2 pt dashed border (charcoal at 18%), radius 22, padding 30/20/26. An amber upload tile (58 pt, radius 17, #E9A319, charcoal up-arrow, amber glow), then “Drop your syllabi here” (15 pt bold) and “or tap to browse — add as many as you have” (12.5 pt, faint).

## INTERACTION

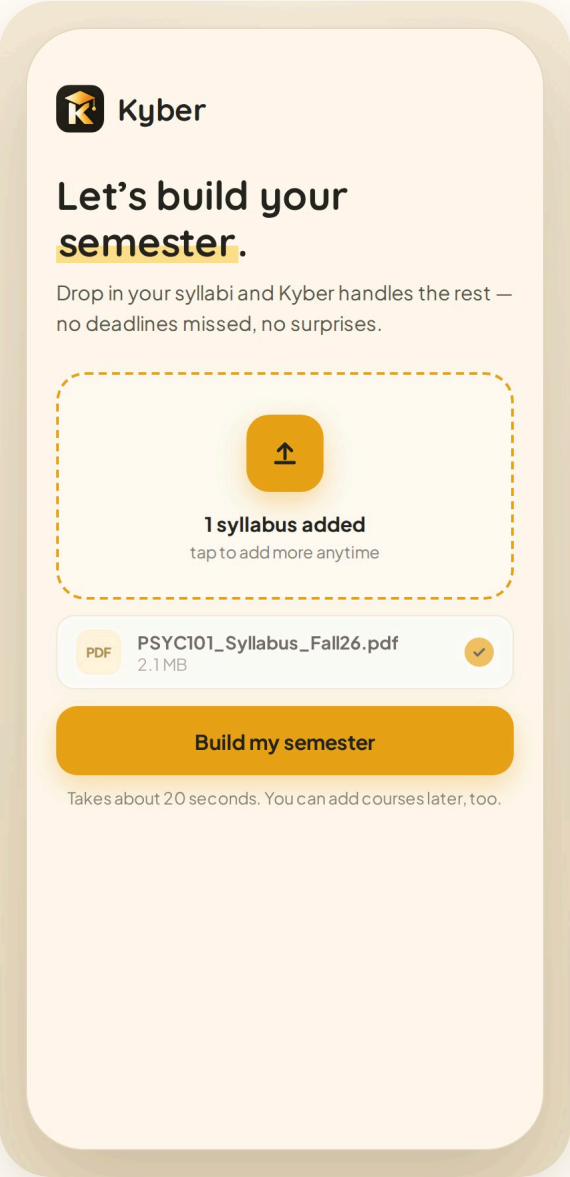

- Tap anywhere on the dropzone to add files. The prototype fakes the upload with 5 demo files, 260 ms apart. In Swift, open **.fileImporter** (PDF/DOCX, multiple selection) and run the same chip animation for each file picked.
- Hover or press: the dashed border turns amber and the card warms to #FFFBF2 (0.2 s ease).

## NEXT

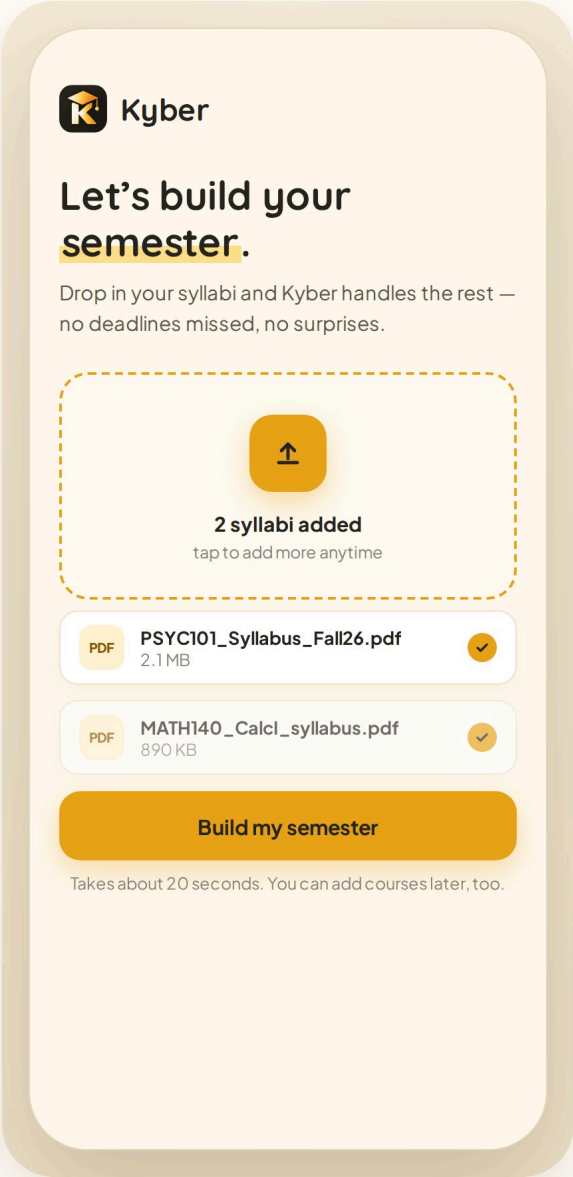

The file chips animate in below the dropzone (step 2).

PHASE 1 — ONBOARDING (RUNS ONCE)

# 2 Upload — files animate in

t ≈ 170 ms: chip 1 fading in

t ≈ 430 ms: chip 2 fading in

## HOW ELEMENTS MOVE

- Each file appears as a **file chip**, one every **260 ms**.
- Chip entrance, keyframe **chipIn**: opacity 0 → 1 and translateY +10 → 0 over 0.45 s ease. In SwiftUI: .transition(.opacity.combined(with: .offset(y: 10))) with .easeOut(duration: 0.45) and a staggered delay.
- The dropzone label switches to **"N syllabi added"** with the caption "tap to add more anytime". Once files are in, the border stays amber and dashed.

## FILE CHIP ANATOMY

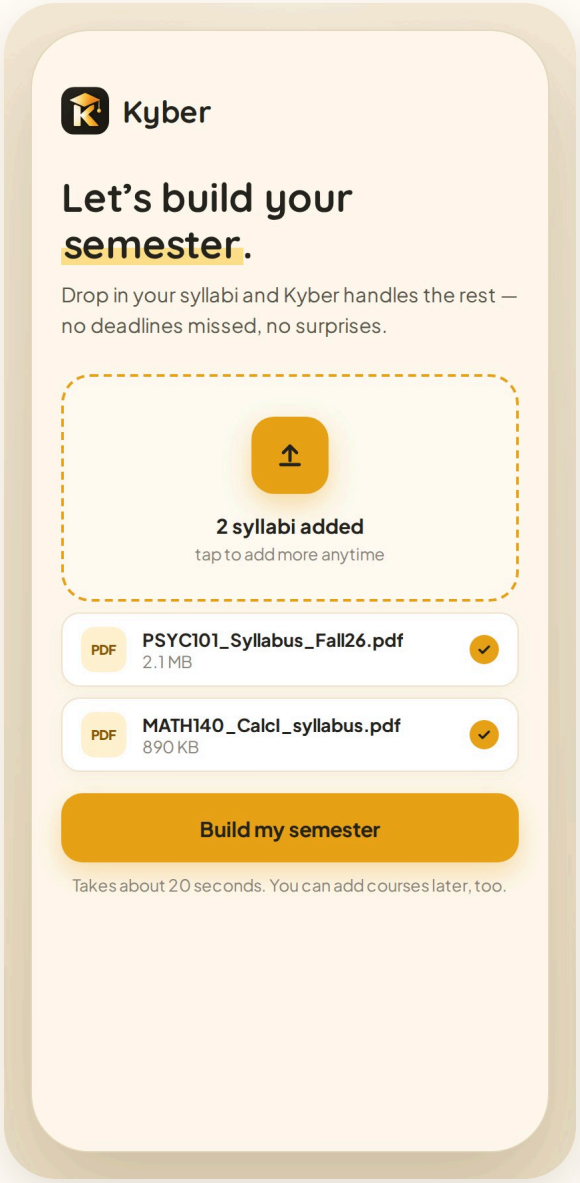

- White card, 1 pt border (#EFE4CF), radius 14, padding 10/14, 8 pt top margin, soft warm shadow.
- Left: a 34×34 tag (radius 10, soft-amber fill #FFF3D2) with "PDF" or "DOC" in amber-ink (#8A5A06).
- Middle: the filename (13.5 pt bold, truncates) and the size below it (12.5 pt, faint).
- Right: a 22 pt amber circle with a charcoal check.

## DEMO FILES

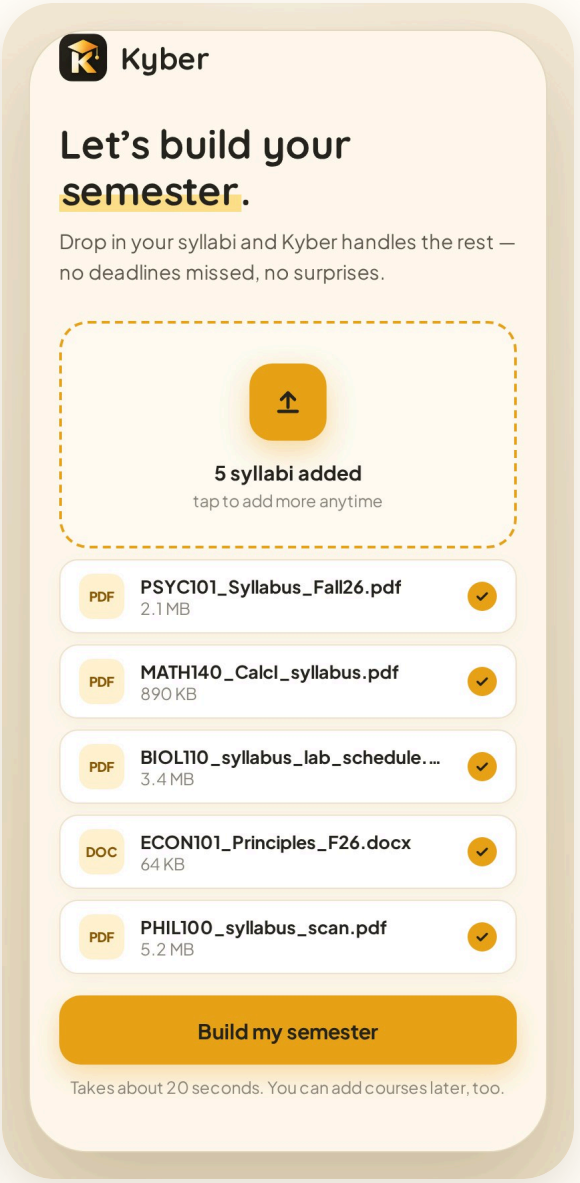

- PSYC101_Syllabus_Fall26.pdf · 2.1 MB
- MATH140_CalcI_syllabus.pdf · 890 KB
- BIOL110_syllabus_lab_schedule.pdf · 3.4 MB
- ECON101_Principles_F26.docx · 64 KB
- PHIL100_syllabus_scan.pdf · 5.2 MB

PHASE 1 — ONBOARDING (RUNS ONCE)

# 3 Upload — ready to build

2 added + button

All 5 added (scrolled)

## ON SCREEN

- Below the chips, a full-width primary button **"Build my semester"**: amber #E9A319, charcoal 15.5 pt bold text, radius 16, 52 pt tall, amber glow (0 8 20 at 32%).
- Helper text under it (12.5 pt, faint): "Takes about 20 seconds. You can add courses later, too."
- The button appears once there is at least one file, with the same chipIn animation.

## INTERACTION

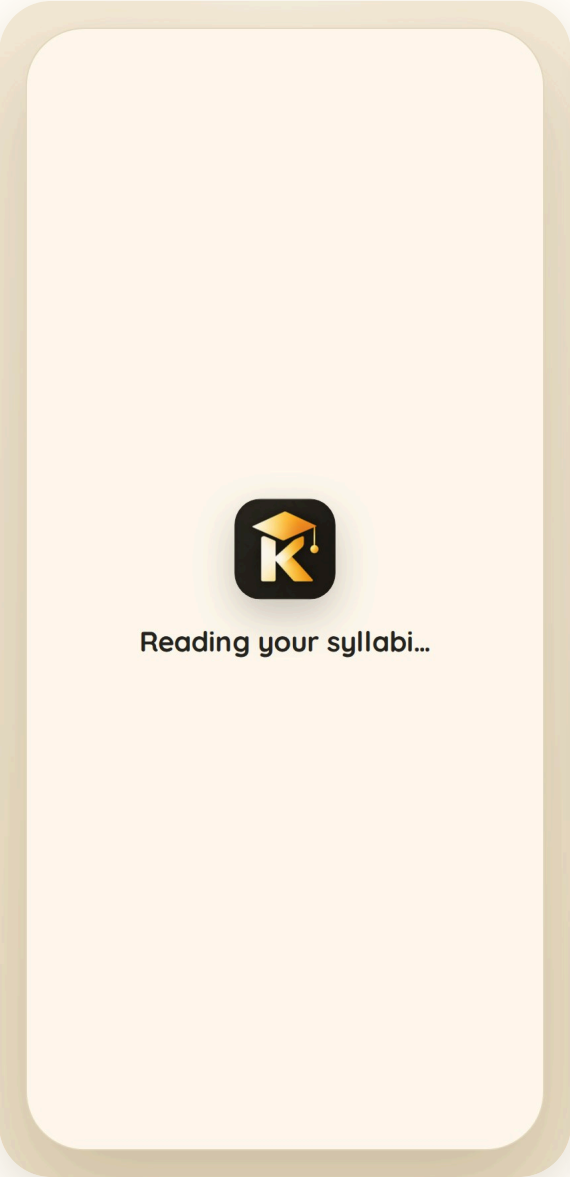

- Tap **Build my semester** to switch to Processing (step 4). The whole upload screen is replaced; there is no push animation.
- Tapping the dropzone again adds more files.

## WHY CHARCOAL TEXT

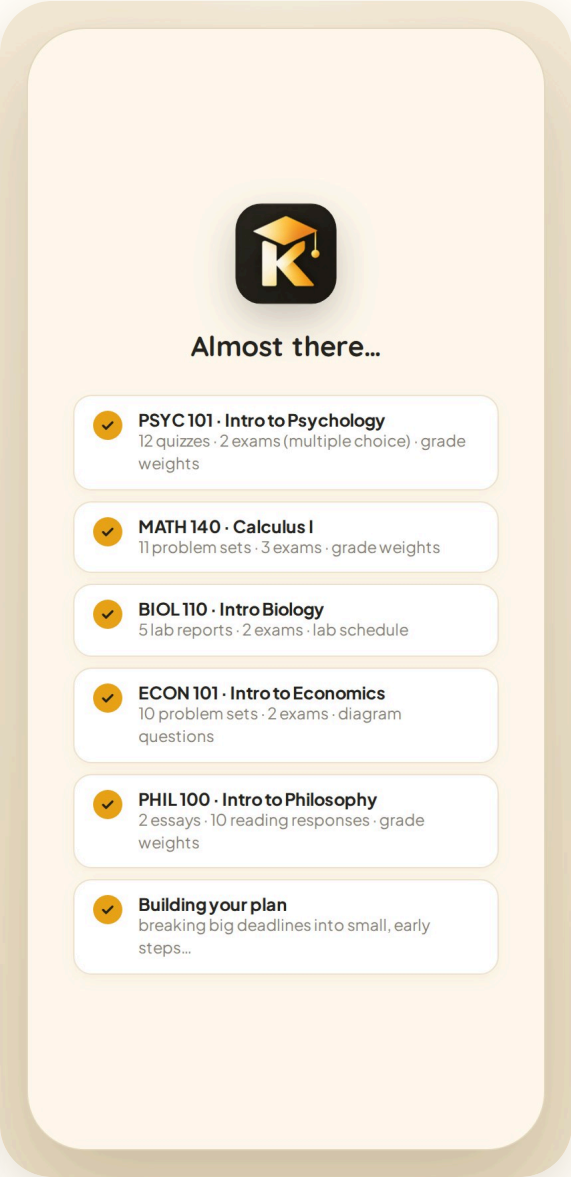

Every primary button in the new look uses charcoal text on amber. White on amber is too low-contrast to read comfortably.

PHASE 1 — ONBOARDING (RUNS ONCE)

# 4 Processing — “Reading your syllabi…”

t = 0: icon only

t ≈ 3.4 s: all rows in

## ON SCREEN

- Everything is centred vertically. The app icon sits large (76 pt, radius 20, soft shadow) and gently bobs with the **floaty** keyframe: translateY 0 → −7 → 0, 2.6 s, looping.
- Status line in Quicksand 21 bold: **“Reading your syllabi…”**. When the last row lands it changes to **“Almost there…”**.
- Below it, up to 6 result rows (max width 320). Each is a white file-chip card with an amber check, a bold title (13 pt) and a faint detail line (12 pt).

## TIMING

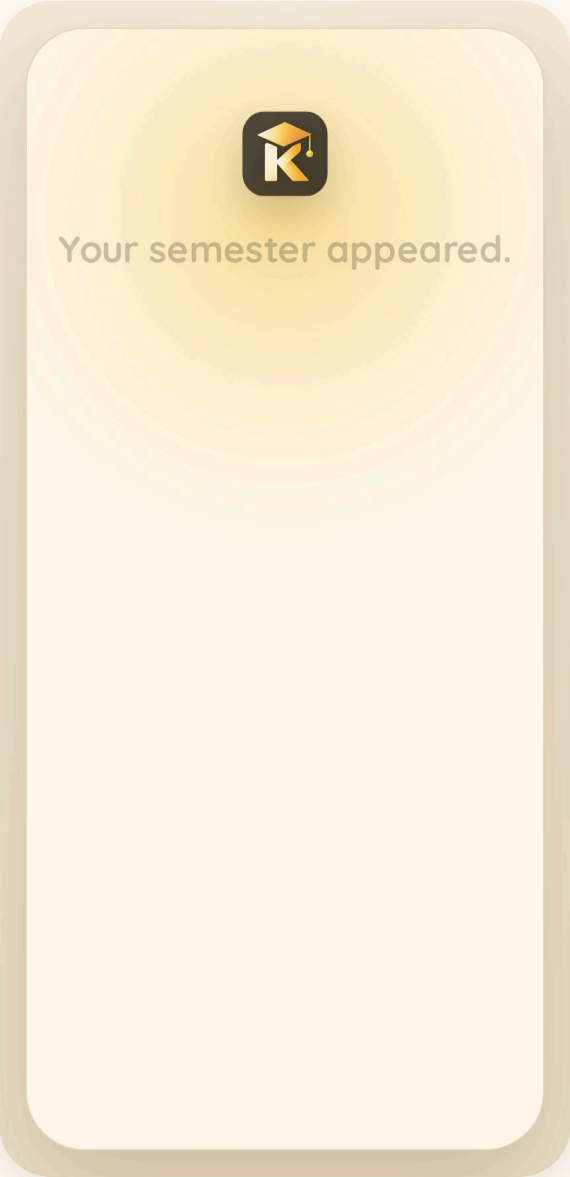

- Row i (1–based) appears at **i × 560 ms** with chipIn. The stack stays centred, so the icon drifts up as rows fill in.
- The Reveal starts automatically at **560 × 7 + 700 = 4,620 ms** after the Build tap. The student doesn’t need to do anything.

## ROWS

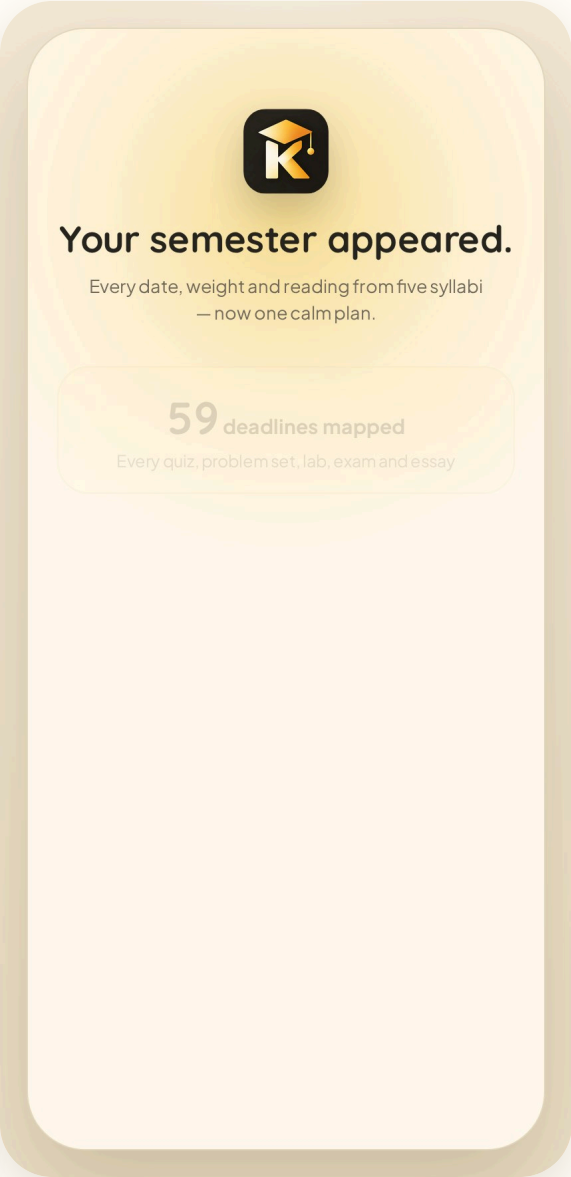

- PSYC 101 · Intro to Psychology: 12 quizzes · 2 exams (multiple choice) · grade weights
- MATH 140 · Calculus I: 11 problem sets · 3 exams · grade weights
- BIOL 110 · Intro Biology: 5 lab reports · 2 exams · lab schedule
- ECON 101 · Intro to Economics: 10 problem sets · 2 exams · diagram questions
- PHIL 100 · Intro to Philosophy: 2 essays · 10 reading responses · grade weights
- Building your plan: breaking big deadlines into small, early steps…

PHASE 1 — ONBOARDING (RUNS ONCE)

# 5 Reveal — transition in

≈ 230 ms: glow + icon

≈ 560 ms: title fading in

## HOW ELEMENTS MOVE

- Processing is replaced by the Reveal screen. A big radial glow (yellow #F2C94C at 55% in the centre, fading through #FFE3A0 to cream) sits behind the top third.
- The app icon (64 pt, radius 17) arrives first, then everything staggers in with chipIn (0.45 s ease, fade plus rise 10 pt):

## STAGGER

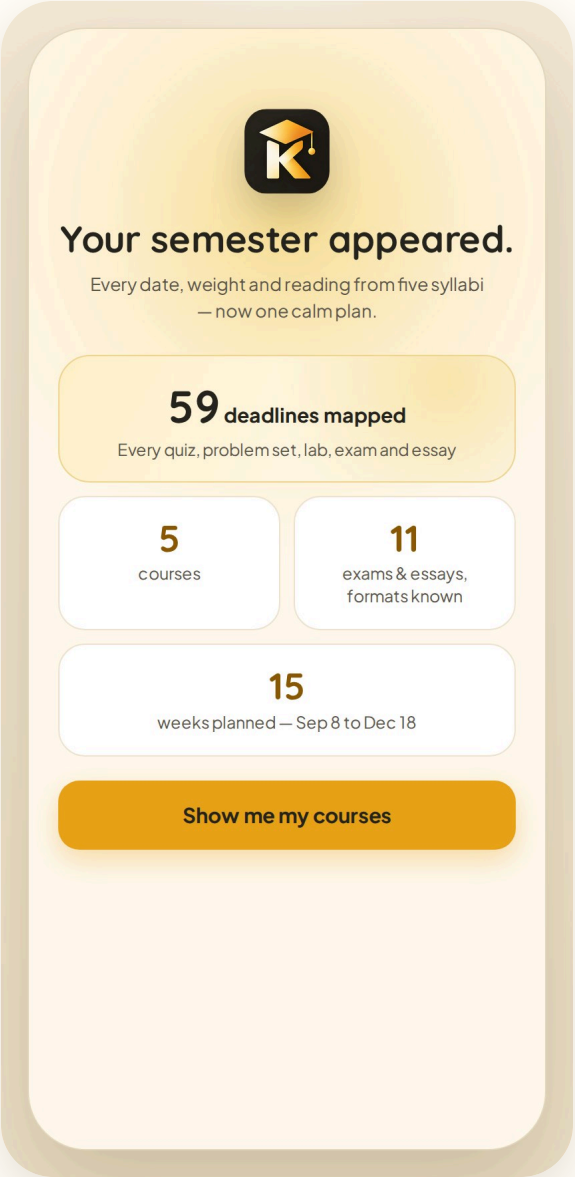

```
app icon                      delay 0.00 s
h1 “Your semester appeared.”  delay 0.15 s
subtitle                      delay 0.30 s
hero stat (59 deadlines)      delay 0.50 s
stat 2 (5 courses)            delay 0.68 s
stat 3 (11 exams & essays)    delay 0.86 s
stat 4 (15 weeks)             delay 1.04 s
“Show me my courses” button   delay 1.40 s
```

## SWIFTUI

Drive each element with its own @State flag and .animation(.easeOut(duration: 0.45).delay(d)), or use a PhaseAnimator.

PHASE 1 — ONBOARDING (RUNS ONCE)

# 6 Reveal — “Your semester appeared.”

Final reveal state

## ON SCREEN

- H1 in Quicksand 28 bold, charcoal: “Your semester appeared.” Sub: “Every date, weight and reading from five syllabi — now one calm plan.”
- Stats grid, 2 columns with a 10 pt gap:
  - Hero card, full width: soft-amber gradient (#FFF1C9 → #FFFBF2), 1.5 pt #F0D68E border, radius 24, with a glow. **59** (Quicksand 34) “deadlines mapped”, and under it “Every quiz, problem set, lab, exam and essay”.
  - White cards: **5** courses · **11** exams & essays, formats known.
  - Full-width white card: **15** weeks planned — Sep 8 to Dec 18. Numbers are Quicksand 28 in amber-ink, labels 12.5 pt muted.
- Primary button: **“Show me my courses”**.

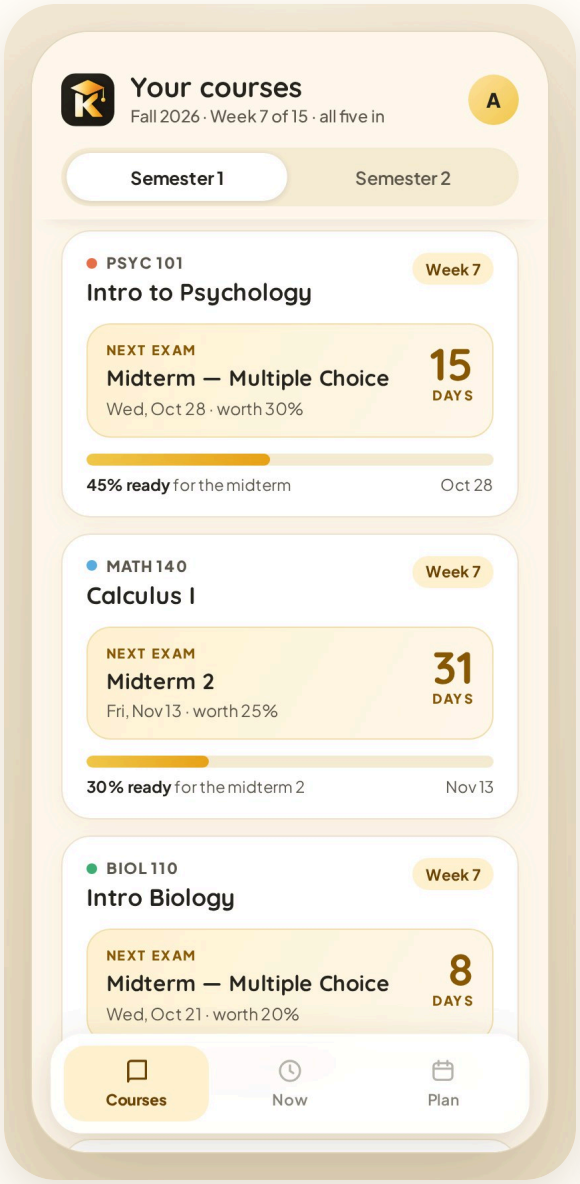

## EXPLAIN EVERY NUMBER

- Each stat carries its own plain-language label. Nothing is shown as a bare score.
- 59 deadlines = PSYC 14 (12 quizzes + 2 exams) + MATH 14 (11 problem sets + 3 exams) + BIOL 7 (5 labs + 2 exams) + ECON 12 (10 problem sets + 2 exams) + PHIL 12 (2 essays + 10 responses).
- 11 exams & essays = PSYC 2 + MATH 3 + BIOL 2 + ECON 2 + PHIL 2.

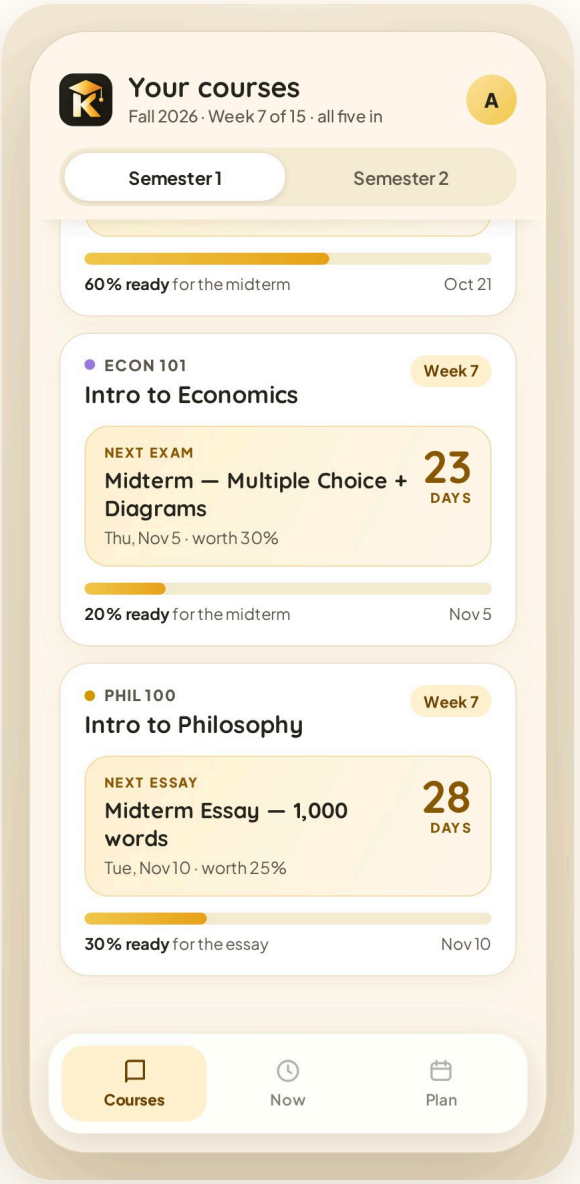

## INTERACTION

Tap **Show me my courses** to go to the main app on the **Courses** tab. Set hasOnboarded = true here so onboarding never shows again.

# 7 Courses — list (Semester 1)

Top

Scrolled to bottom

## ON SCREEN

- Header: the app icon (40 pt, radius 11), the title "Your courses" (Quicksand 21 bold, charcoal) and the subtitle "Fall 2026 · Week 7 of 15 · all five in" (12.5 pt, muted). On the right, a 38 pt avatar circle (yellow gradient, charcoal "A").
- Segmented control: **Semester 1 | Semester 2**, pinned with the header. The header gets a soft shadow once the list scrolls under it.
- One card per course, 5 in total. White, radius 22, 1 pt #EFE4CF border.
- Card anatomy: a course dot and code (11.5 pt, heavy, tracked, muted), the course name (Quicksand 18 bold) and a soft "Week 7" pill.
- **Next exam** box: soft-amber gradient, radius 18. An eyebrow "NEXT EXAM" or "NEXT ESSAY" in amber-ink (no red pill), the title (Quicksand 16.5), the date · weight, and a countdown on the right (Quicksand 34, amber-ink, with DAYS below).
- Readiness bar: 9 pt track (#F6EBD3), with a #F2C94C → #E9A319 gradient fill. Under it, "45% ready for the midterm" and the date.

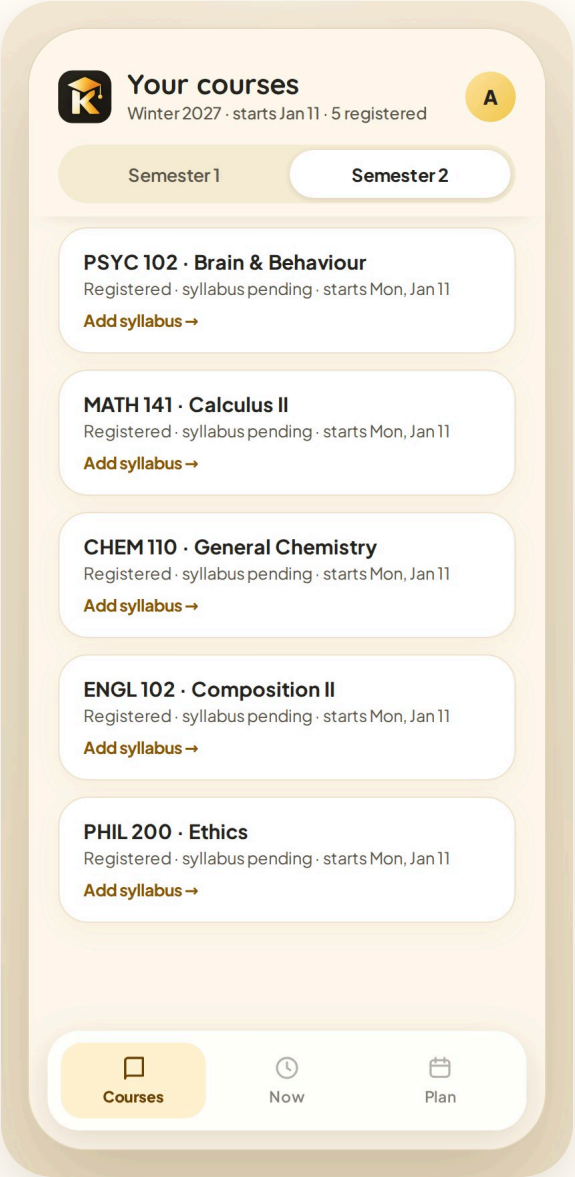

## COURSE COLOURS

PSYC #E8704A · MATH #5AAEE0 · BIOL #3FAF76 · ECON #9B7BE0 · PHIL #D19A00. They're used for dots and calendar tints only. Cards no longer get coloured edges.

## INTERACTION

Tap a card header to expand it inline (step 9). Only one card is open at a time: opening another closes the first.

# 8 Courses — Semester 2

Semester 2 selected

## ON SCREEN

- Tapping **Semester 2** swaps the list with no transition. The subtitle changes to “Winter 2027 · starts Jan 11 · 5 registered”.
- Simple white cards: “PSYC 102 · Brain & Behaviour”, “MATH 141 · Calculus II”, “CHEM 110 · General Chemistry”, “ENGL 102 · Composition II”, “PHIL 200 · Ethics”. Each reads “Registered · syllabus pending · starts Mon, Jan 11”, with an **Add syllabus** → link.

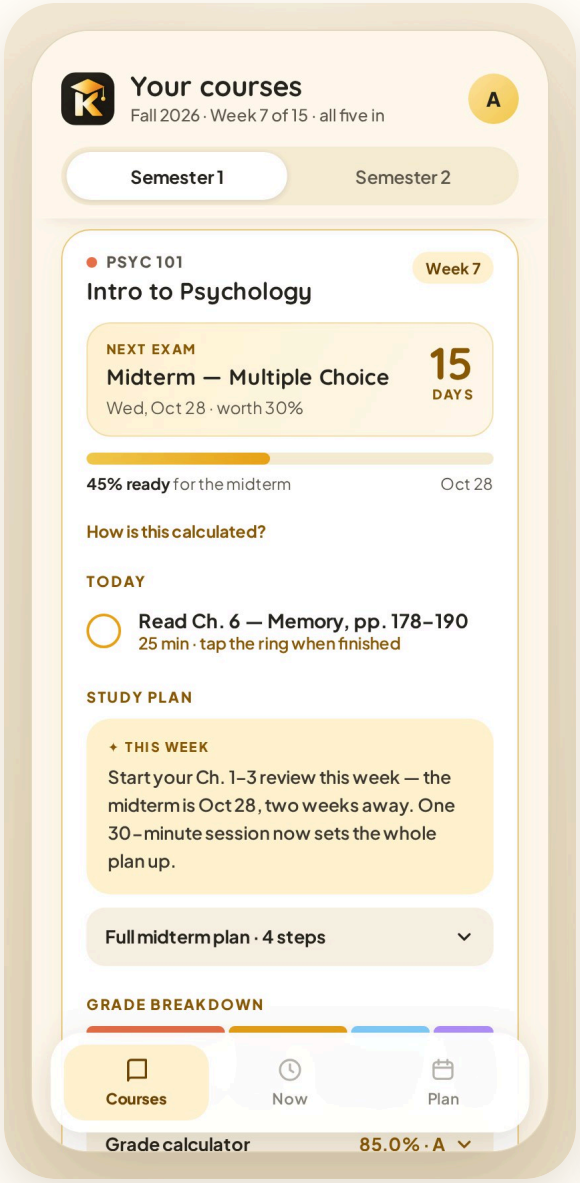

## INTERACTION

- **Add syllabus** → opens the same upload flow for that one course (steps 1–4). The prototype only shows a note, because syllabi arrive in January.
- Tap Semester 1 to return to the full cards.

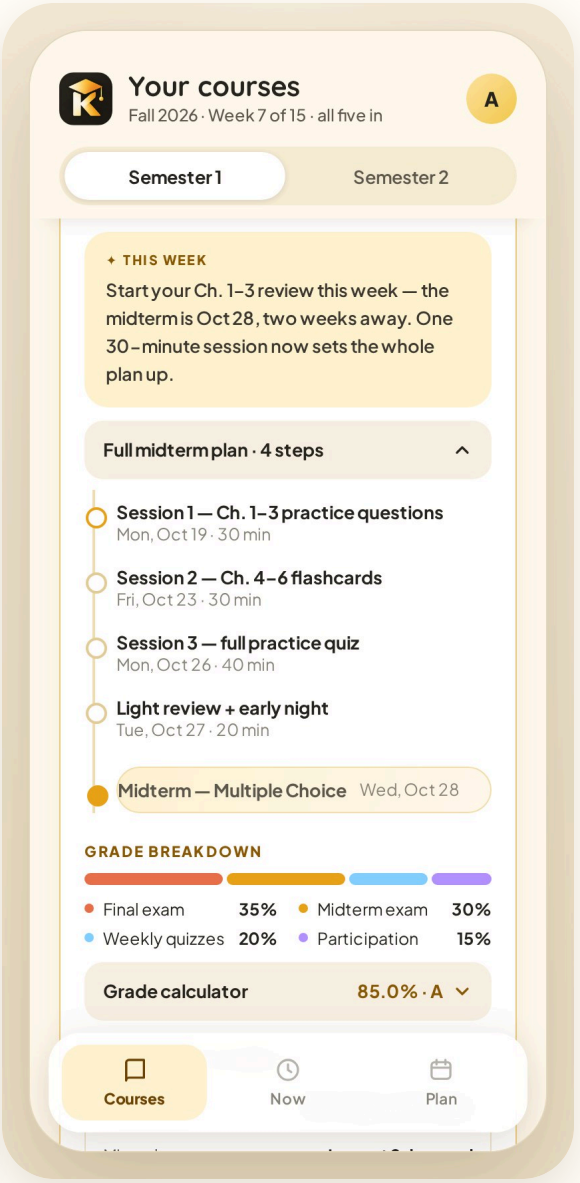

## CHANGED FROM V1

The Semester 2 cards now have an action, and PHIL 200 Ethics replaces the duplicated PHIL 100.

# 9 Course expanded — Today & Study plan

PSYC 101 expanded

"Full midterm plan" opened

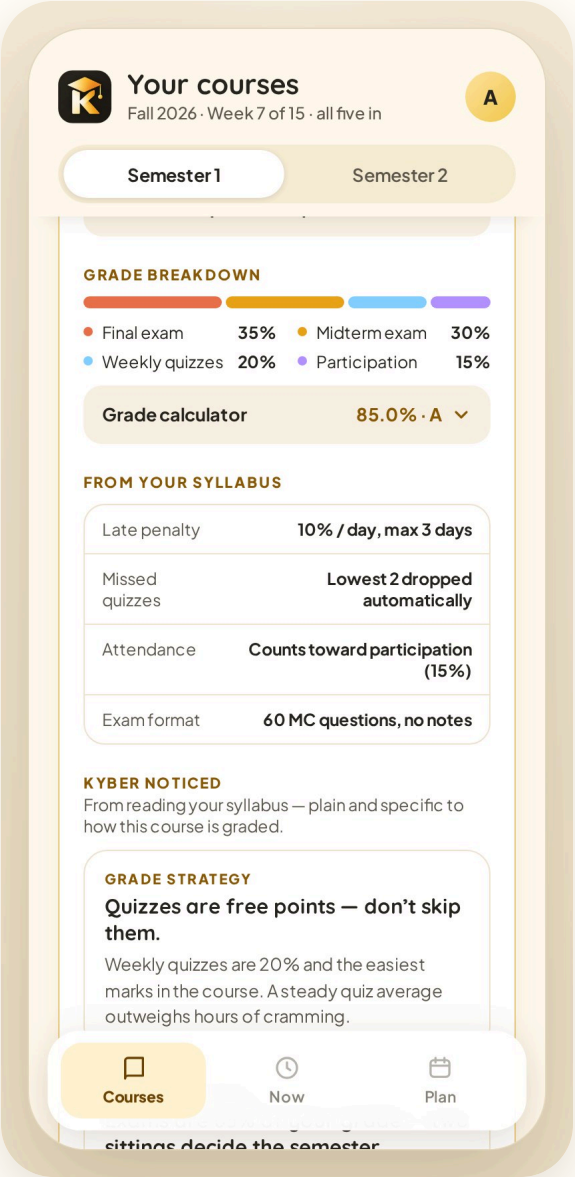

## EXPANDED SECTIONS (IN ORDER)

- A **How is this calculated?** link under the readiness bar (step 14).
- **TODAY** (amber-ink eyebrow, 11 pt, tracked): one task row. It has a 26 pt ring (2.5 pt amber border), the title "Read Ch. 6 — Memory, pp. 178–190" (14.5 pt bold) and "25 min · tap the ring when finished" in amber-ink. When there's nothing due it reads "Nothing today — you're clear here. ✦" (step 15).
- **STUDY PLAN**: a "✦ THIS WEEK" callout (yellow-soft #FFF4CF, radius 18) with one sentence of advice at 13.5 pt semibold.
- A disclosure row, **"Full midterm plan · 4 steps ⌄"** (cream-deep #F8F1E3, radius 14).

## DISCLOSURE: FULL PLAN

- Tap the row to expand it inline; the chevron flips. A vertical timeline (2 pt #F0DFB5 line, 12 pt nodes) lists each step as a bold title with "date · duration":
- Session 1 — Ch. 1–3 practice questions · Mon, Oct 19 · 30 min (first node has an amber ring)
- Session 2 — Ch. 4–6 flashcards · Fri, Oct 23 · 30 min
- Session 3 — full practice quiz · Mon, Oct 26 · 40 min
- Light review + early night · Tue, Oct 27 · 20 min
- Midterm — Multiple Choice · Wed, Oct 28 (a filled amber node, with muted text)
- SwiftUI: a DisclosureGroup, or a custom button that toggles @State with withAnimation(.easeInOut).

# 10 Course expanded — Grade breakdown & syllabus

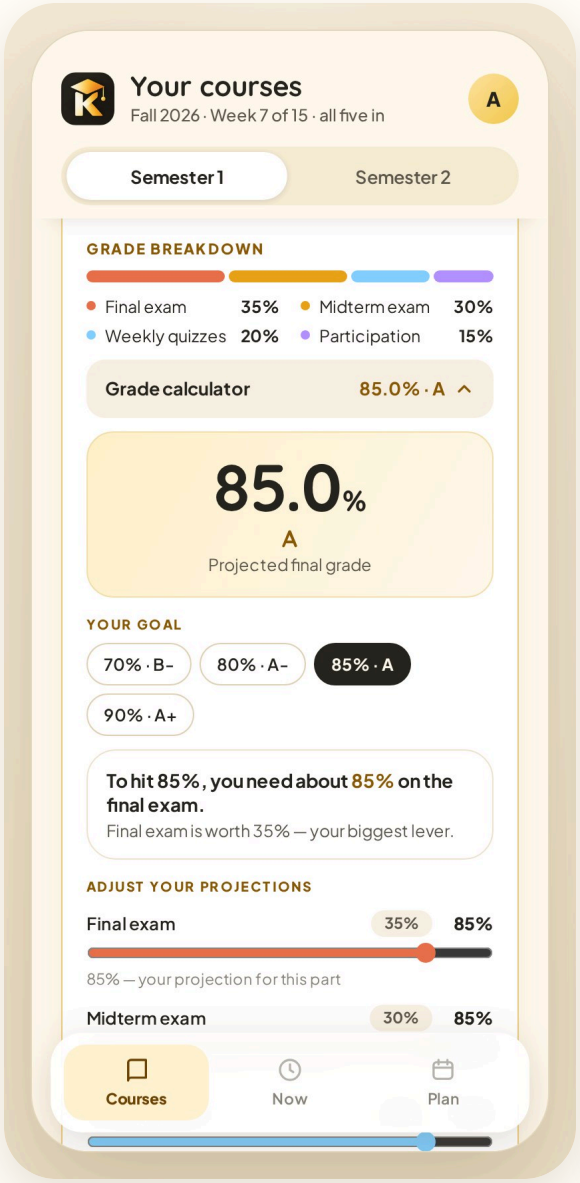

Grade breakdown, calculator row, syllabus facts

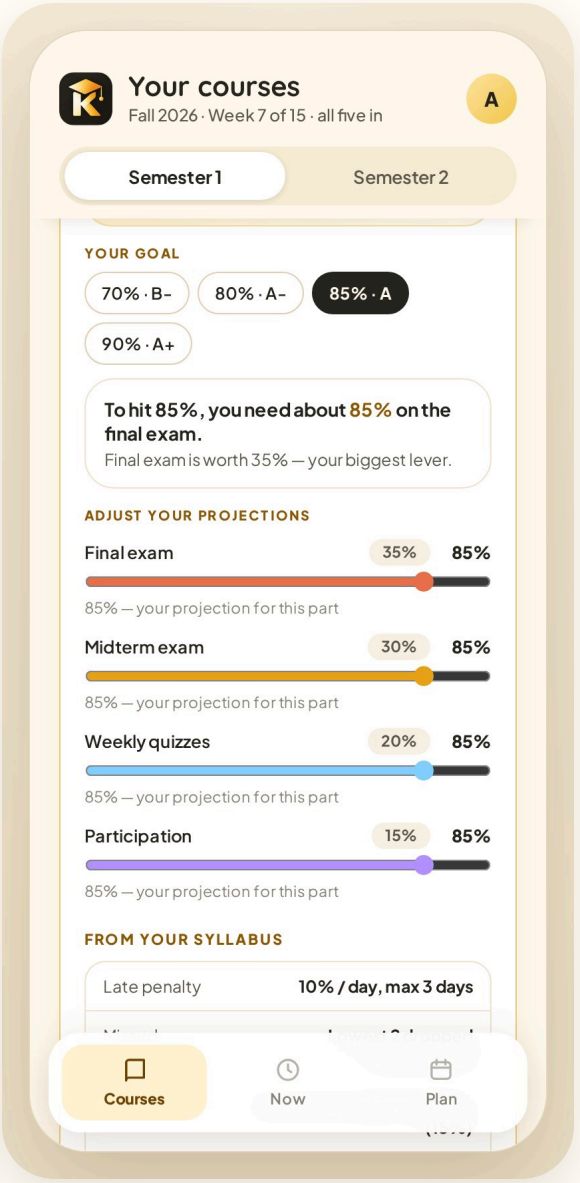

## ON SCREEN

- **GRADE BREAKDOWN**: a stacked horizontal bar (9 pt tall, rounded, 3 pt gaps) where each segment's width equals its weight. The colours, in order, are #E8704A, #E9A319, #83CFFF and #B392FF. Below it, a two-column legend: Final exam 35% · Midterm exam 30% · Weekly quizzes 20% · Participation 15%.
- Disclosure row **"Grade calculator"**, with the live projection on the right in amber-ink: "85.0% · A ⌄" (step 11).
- **FROM YOUR SYLLABUS**: a bordered white table (radius 16), with the label on the left in muted text and the value in bold on the right:
- Late penalty: 10% / day, max 3 days
- Missed quizzes: Lowest 2 dropped automatically
- Attendance: Counts toward participation (15%)
- Exam format: 60 MC questions, no notes

# 11 Grade calculator — opened

Opened

Goal + projections

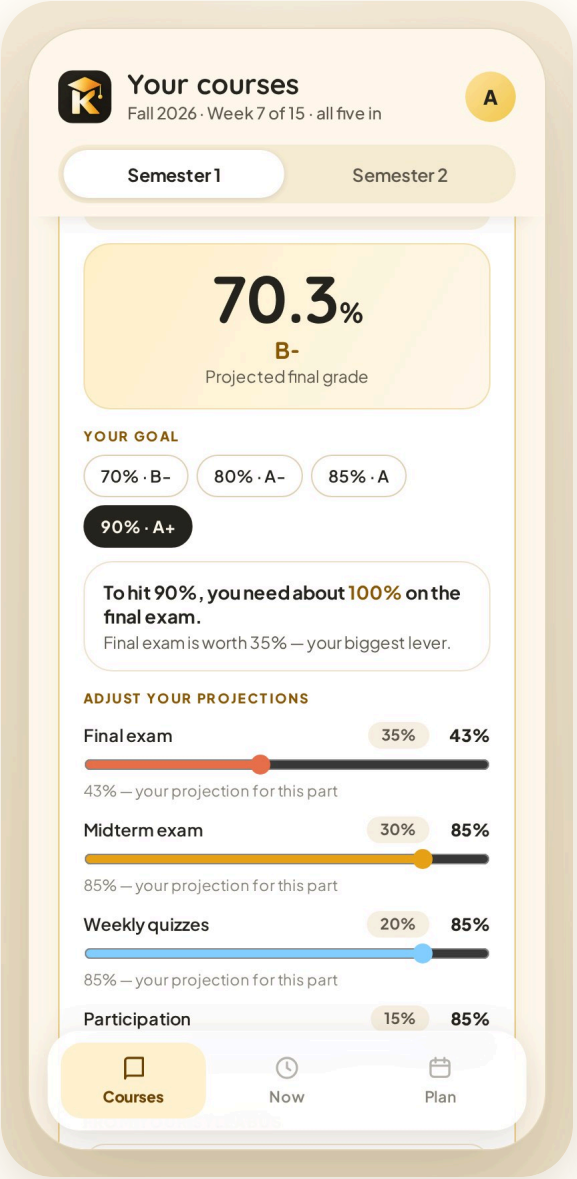

## ON SCREEN

- Result card (soft-amber gradient, radius 20): **85.0%** (Quicksand 50, with a smaller "%"), the letter grade in amber-ink, and "Projected final grade".
- **YOUR GOAL** chips (32 pt pills, 1 pt border): 70% · B-, 80% · A-, 85% · A, 90% · A+. The selected chip is charcoal with cream text.
- Advice card: "To hit **85%**, you need about **85%** on the final exam." and "Final exam is worth 35% — your biggest lever."
- **ADJUST YOUR PROJECTIONS**: one slider per part. Each row shows the name, a weight pill ("35%"), the current value on the right, a slider tinted in that part's colour, and the caption "85% — your projection for this part".

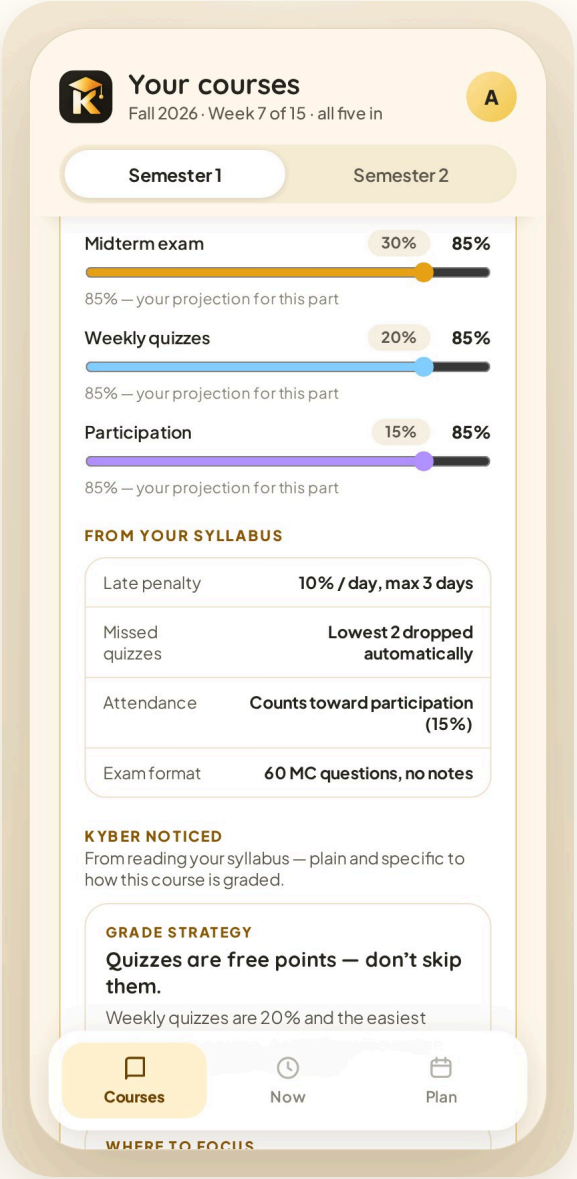

## LOGIC TO REPLICATE

- projected = Σ(weight × score) / 100. Every part starts at an 85% projection.
- The letter comes from the percentage: 90+ A+, 85 A, 80 A-, 77 B+, 73 B, 70 B-, 67 C+, 60 C.
- The required score is solved against the highest-weight part: need = ⌈(goal − Σ others) / weight⌉. If that is over 100, the card says the goal is a stretch instead of showing an impossible number.

# 12 Grade calculator — interaction

Goal 90% + final dragged to 43%

All projections

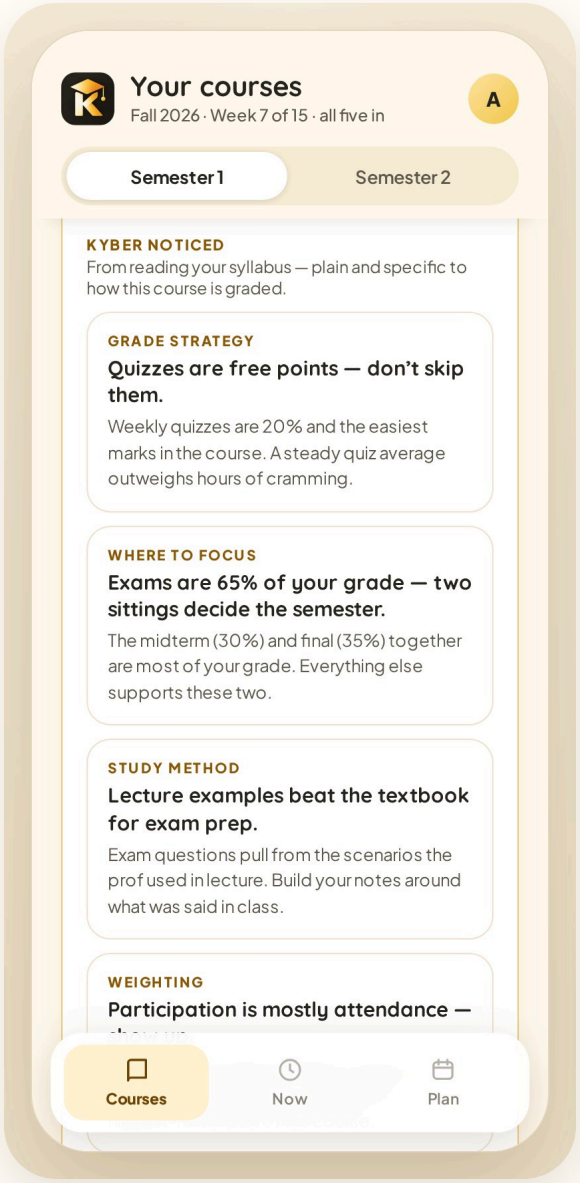

## WHAT CHANGED

- Tapping **90% · A+** moves the charcoal selection and rewrites the advice to "To hit 90%, you need about 100% on the final exam."
- Dragging **Final exam** to 43% updates the headline to **70.3% · B–** immediately (35 × .43 + 30 × .85 + 20 × .85 + 15 × .85 = 70.3). The value label and caption update too.
- The summary on the disclosure row ("70.3% · B-") reflects the live value.

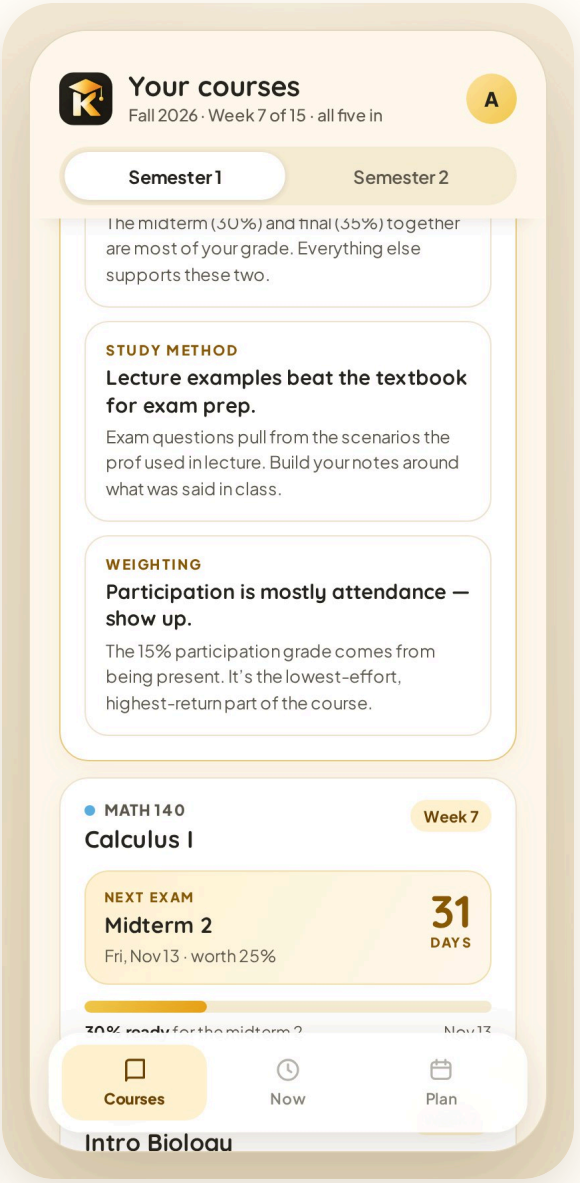

## SWIFTUI NOTES

Use Slider(value:in: 0...100, step: 1), tinted per part. Keep projections in @State on the course model, so they survive closing and reopening the calculator.

# 13 Course expanded — Kyber noticed

Insights

End of the card

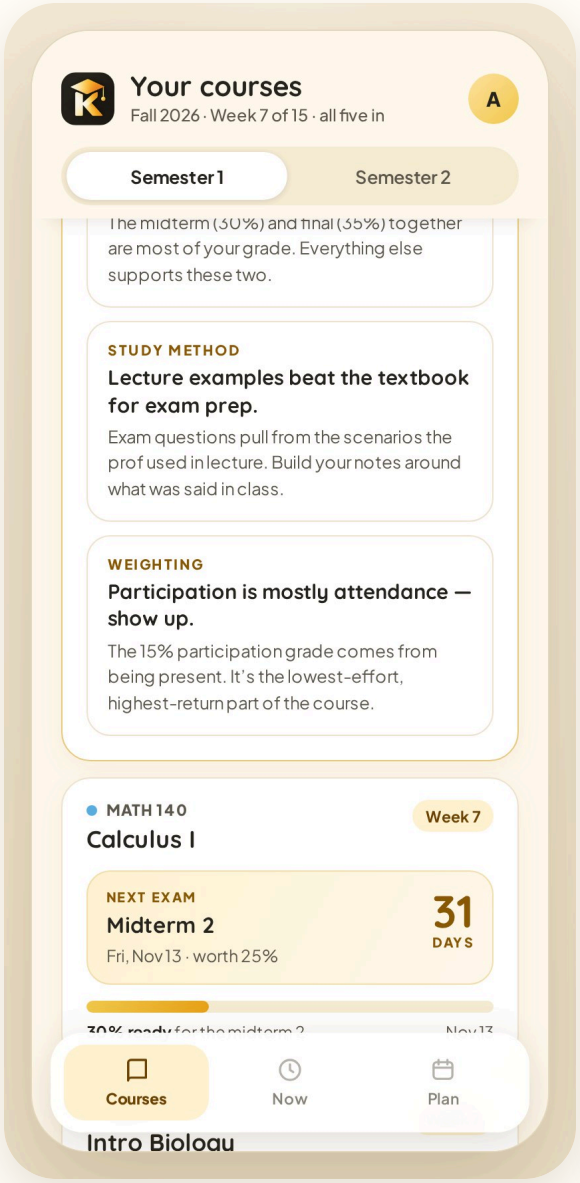

## ON SCREEN

- **KYBER NOTICED** eyebrow, with the caption "From reading your syllabus — plain and specific to how this course is graded."
- Four white cards (radius 18, 1 pt border, no coloured edge). Each has a small amber-ink category, a title in Quicksand 15.5 and a body line at 13 pt, muted:
- GRADE STRATEGY: Quizzes are free points — don't skip them.
- WHERE TO FOCUS: Exams are 65% of your grade — two sittings decide the semester.
- STUDY METHOD: Lecture examples beat the textbook for exam prep.
- WEIGHTING: Participation is mostly attendance — show up.
- The expanded card ends here, and the next course card (MATH 140) follows.

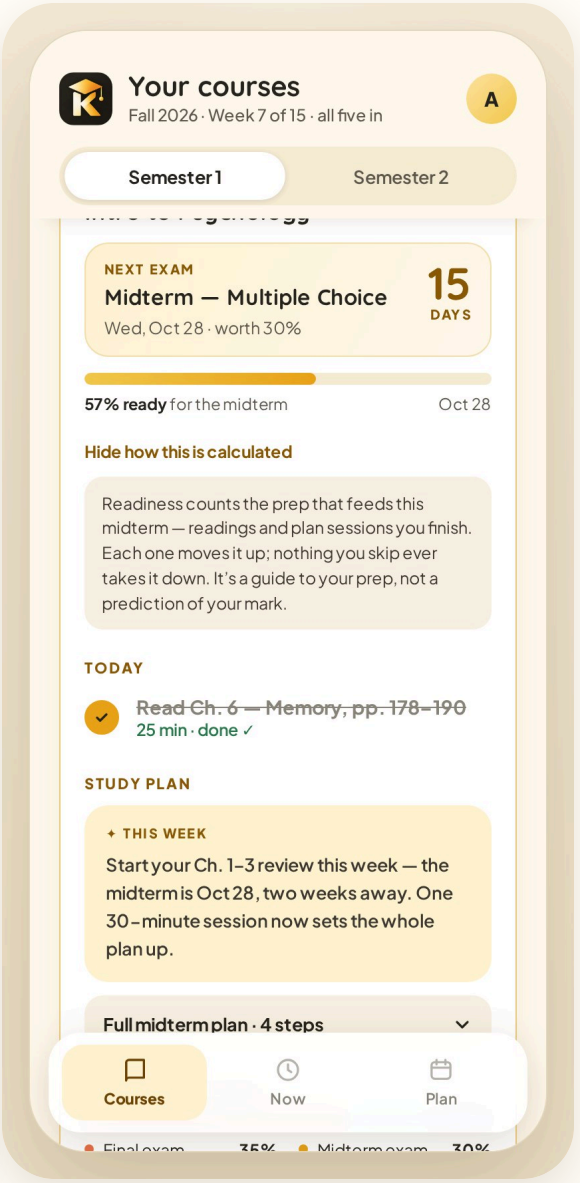

## NOTE

The desktop app shows these as a "1 of 4" carousel. On the phone they stack, because scrolling is the natural gesture. All the per-course text is in Appendix C.

# 14 Completing a task — and readiness, explained

After tapping the ring

"How is this calculated?" opened

## INTERACTION

- Tap the ring next to "Read Ch. 6 — Memory…". The ring fills amber with a charcoal ✓, the title strikes through and greys, and the meta becomes "25 min · done ✓" in green (#2E7A50).
- The readiness bar animates from **45%** → **57%** (width 0.35 s ease). A toast confirms: "✦ Nice — that's done".
- This is shared state: the same task shows as done on Now (step 16) and in Plan.

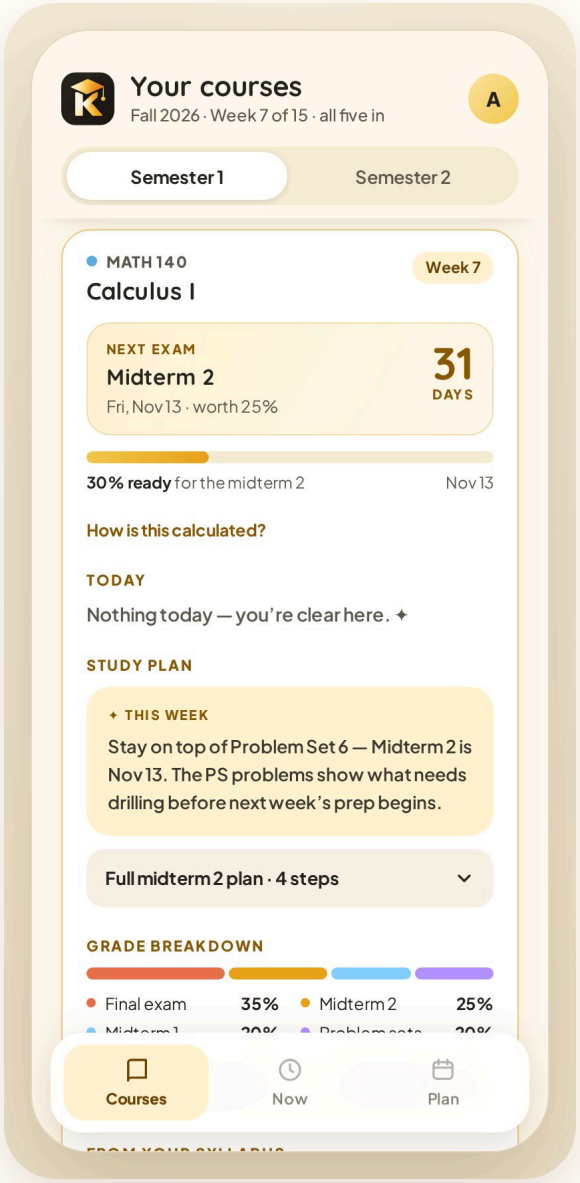

## EXPLAIN EVERY NUMBER

- **How is this calculated?** opens a cream note: "Readiness counts the prep that feeds this midterm — readings and plan sessions you finish. Each one moves it up; nothing you skip ever takes it down. It's a guide to your prep, not a prediction of your mark."
- Readiness only ever goes up. Missing something never lowers it. That's the "support, never shame" rule.

## SWIFTUI

Use an @Observable store with tasks: [Task] and a computed readiness per course. Animate the bar with withAnimation(.easeInOut(duration: 0.35)).

# 15 Course variant — nothing due today

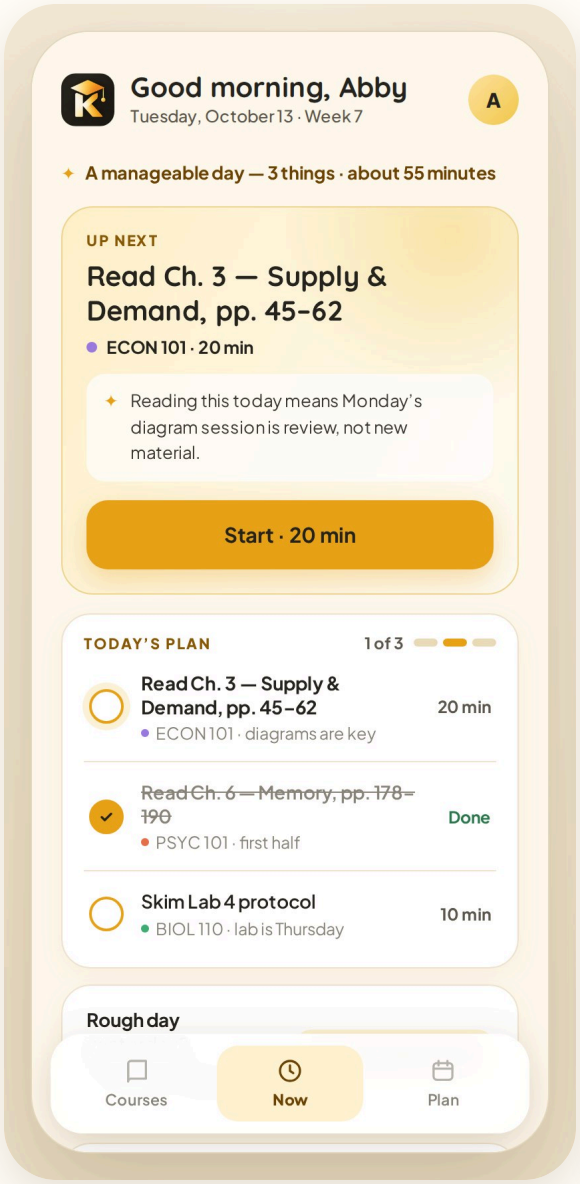

MATH 140 expanded

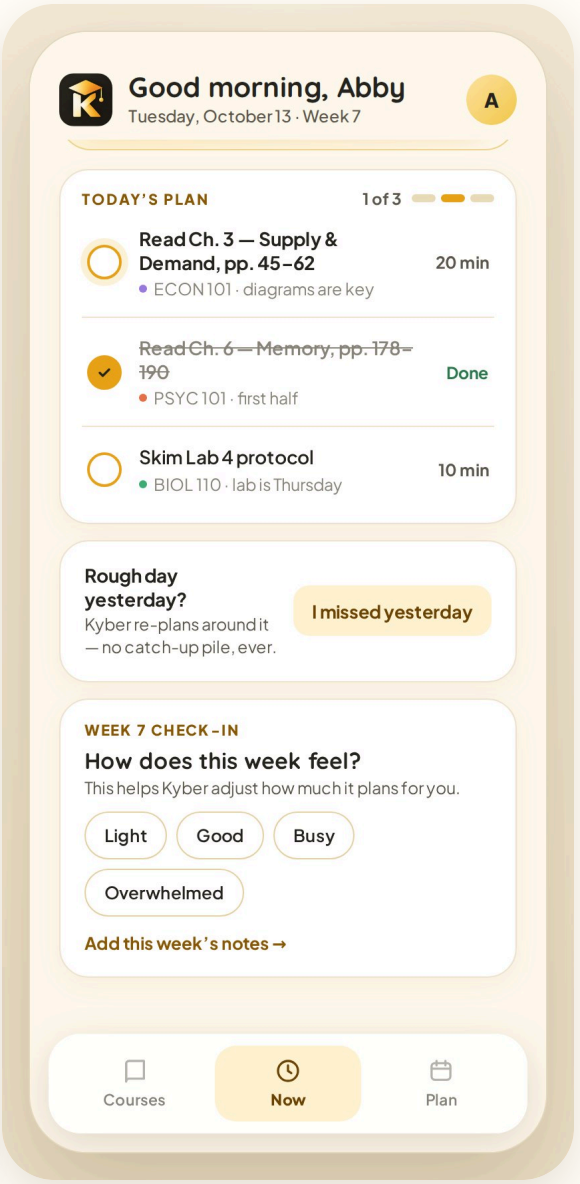

## EMPTY STATE

- When a course has no task today, the TODAY section shows plain text: "Nothing today — you're clear here. ✦" (14 pt semibold, muted). There's no ring.
- Opening MATH 140 closes PSYC 101 automatically (single-open accordion).
- The rest of the sections are the same (Study plan, Grade breakdown, Calculator, From your syllabus, Kyber noticed), with MATH's data. See Appendix C.

# 16 Now — today's focus

Top

Scrolled

## ON SCREEN

- Header: "Good morning, Abby" (follows the time of day), with "Tuesday, October 13 · Week 7".
- Day summary line (✦, 13.5 pt bold, amber-deep): "A manageable day — 3 things · about 55 minutes".
- **UP NEXT** hero: soft-amber gradient with a glow, radius 24. The task title (Quicksand 21), the course dot + "ECON 101 · 20 min", a ✦ why-line on a white 72% panel ("Reading this today means Monday's diagram session is review, not new material."), and a full-width amber button **"Start · 20 min"**.
- **TODAY'S PLAN** card: an eyebrow, "1 of 3" with small progress segments, then the task rows. Each has a ring, a title, a coloured dot with the course code and a hint ("diagrams are key"), and the duration or "Done". The Up next ring has a soft glow.
- A "Rough day yesterday?" card with a soft-amber **I missed yesterday** button (step 21).
- A Week 7 check-in card (step 22).

## SUMMARY LINE RULES

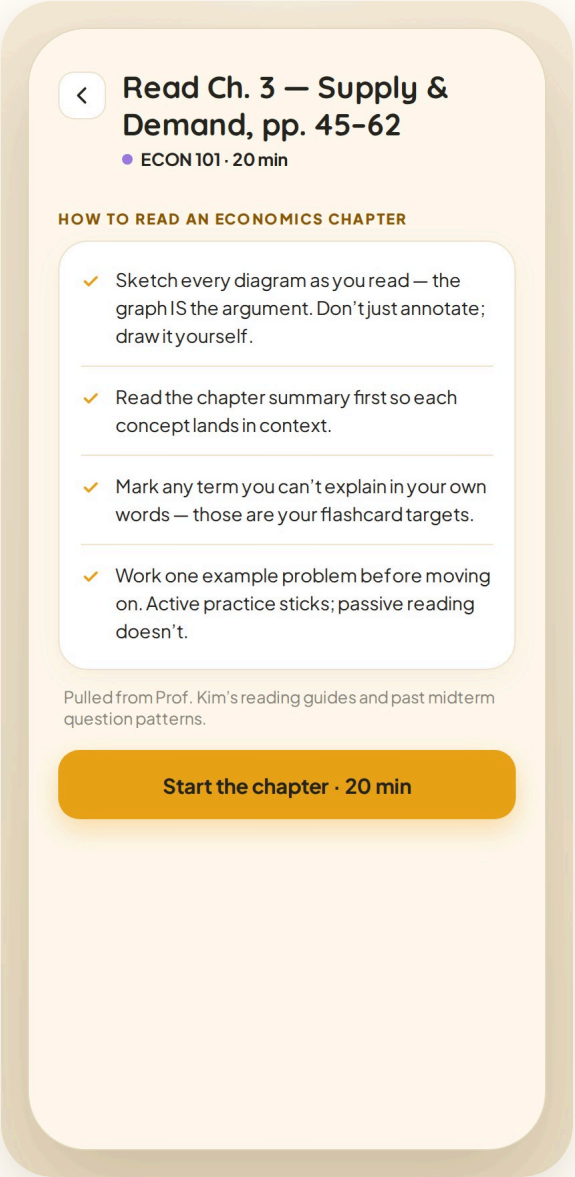

35 min or less: "A lighter day". 75 min or less: "A manageable day". More: "A fuller day, in short pieces". With one task left: "Nearly there — one thing left". With none left: "All done — the rest of today is yours".

## INTERACTION

Tap a ring to toggle done (as in step 14). Tap **Start · 20 min** to push the Reading guide (step 17).

PHASE 2 — NOW TAB

# 17 Reading guide (pushed from Up next)

Reading guide

## ON SCREEN

- A back button (36 pt, white, radius 12, 1 pt border) next to the title "Read Ch. 3 — Supply & Demand, pp. 45–62" (Quicksand 23, wraps), with "ECON 101 · 20 min" below.
- Eyebrow: "HOW TO READ AN ECONOMICS CHAPTER".
- A checklist card with 4 rows, each with an amber ✓ and 14 pt text: sketch every diagram · read the chapter summary first · mark terms you can't explain · work one example problem.
- Source note (faint): "Pulled from Prof. Kim's reading guides and past midterm question patterns."
- Primary button: "Start the chapter · 20 min".

## INTERACTION

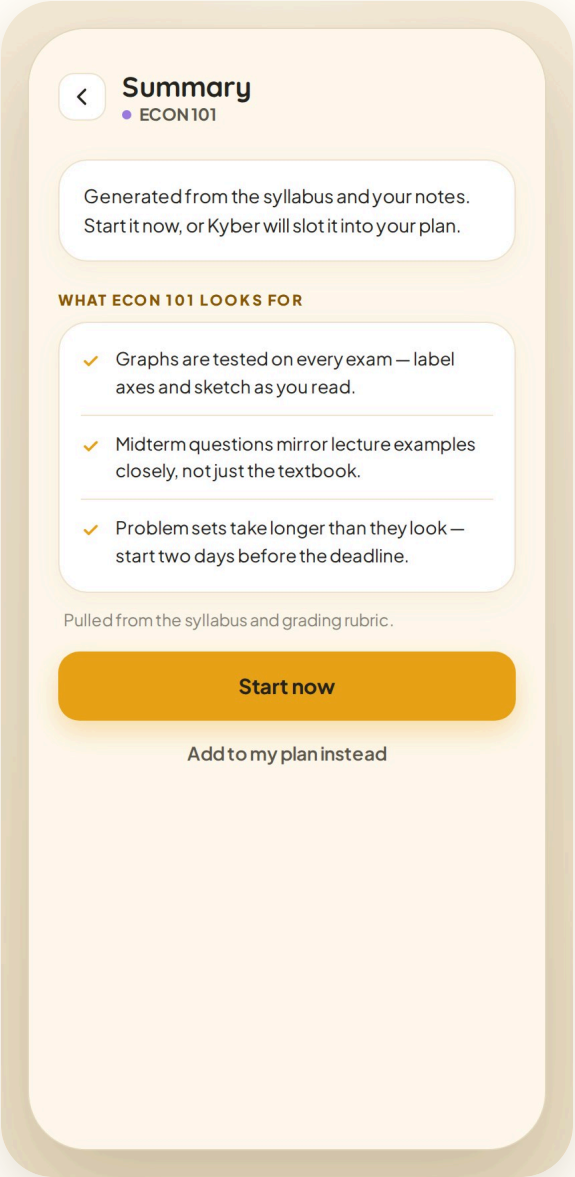

- The back button returns to Now.
- **Start the chapter** opens the Summary screen (step 18).

## CHANGED FROM V1

The tab bar is hidden on **every** pushed screen: Reading guide, Summary and Week notes. v1 hid it on some and not others.

PHASE 2 — NOW TAB

# 18 Summary — before starting

Summary intro

## ON SCREEN

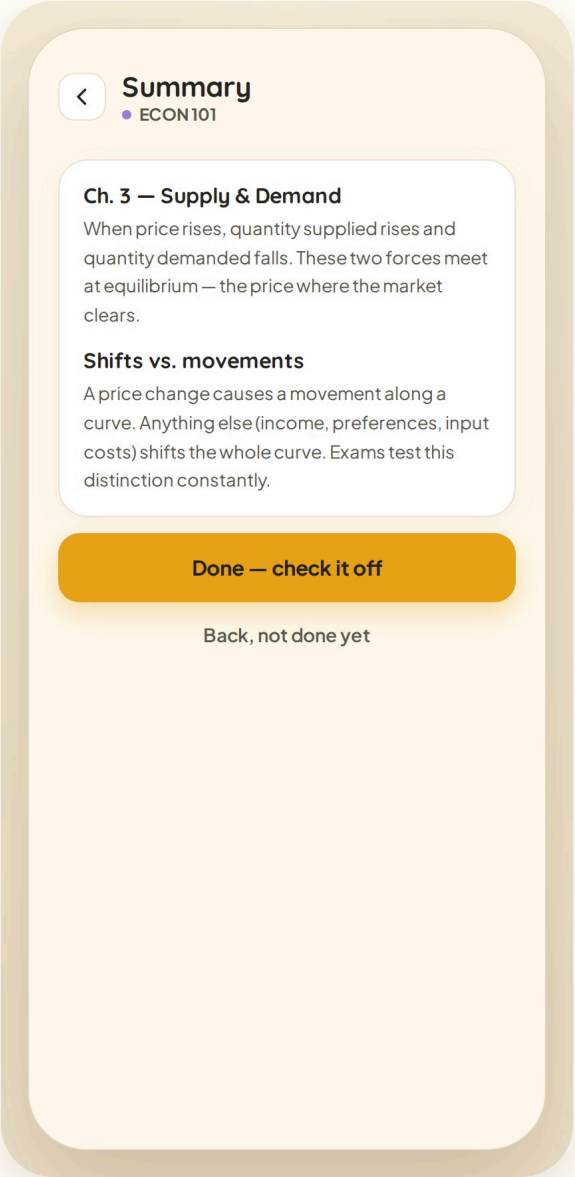

- A compact header with the back button, “Summary” (Quicksand 21) and “ECON 101” with its dot.
- Info card: “Generated from the syllabus and your notes. Start it now, or Kyber will slot it into your plan.”
- A “WHAT ECON 101 LOOKS FOR” checklist with 3 rows: graphs are tested on every exam · midterm questions mirror lecture examples · problem sets take longer than they look.
- “Pulled from the syllabus and grading rubric.”
- Primary: **Start now**. Text button: **Add to my plan instead**.

## INTERACTION

- **Start now** swaps the content to the study notes (step 19).
- **Add to my plan instead** goes back to where you came from (Now or Plan).
- The same Summary screen opens when you tap a Kyber study item in Plan.

PHASE 2 — NOW TAB

# 19 Summary — content, then check off

Summary content

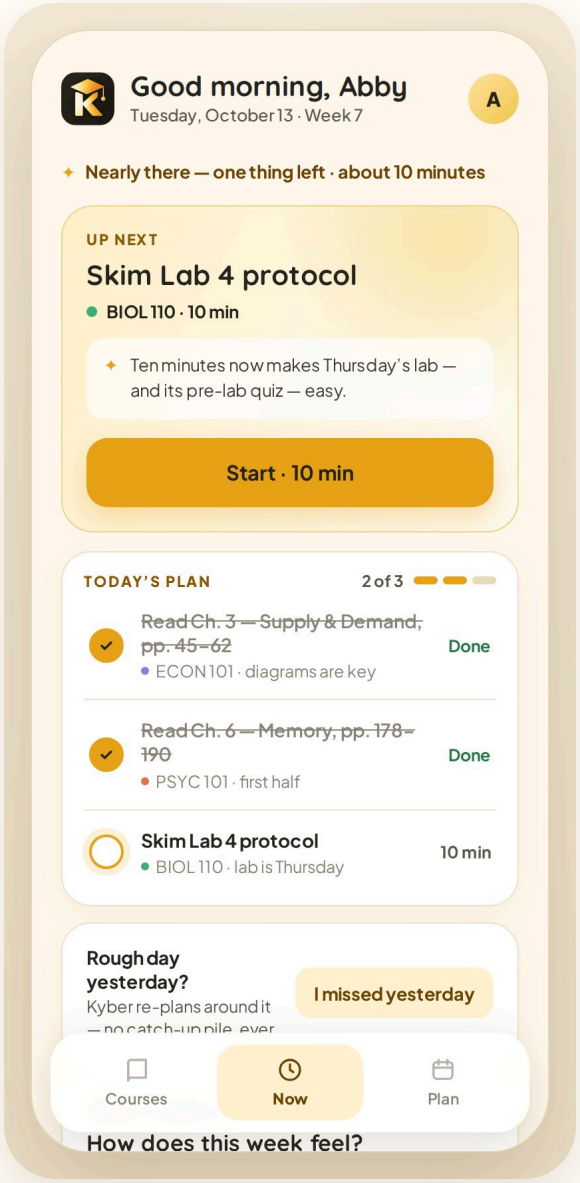

## ON SCREEN

- A white card with short study notes under Quicksand sub-headings:
- **Ch. 3 — Supply & Demand**: When price rises, quantity supplied rises and quantity demanded falls. These two forces meet at equilibrium — the price where the market clears.
- **Shifts vs. movements**: A price change causes a movement along a curve. Anything else (income, preferences, input costs) shifts the whole curve. Exams test this distinction constantly.
- Primary: **Done — check it off**. Text button: **Back, not done yet**.

## INTERACTION

- **Done — check it off** returns to Now, marks the task done, shows the toast "✦ Nice — that's done", and advances Up next (step 20).
- **Back, not done yet** returns to Now with no change.

# 20 Now — after finishing a task

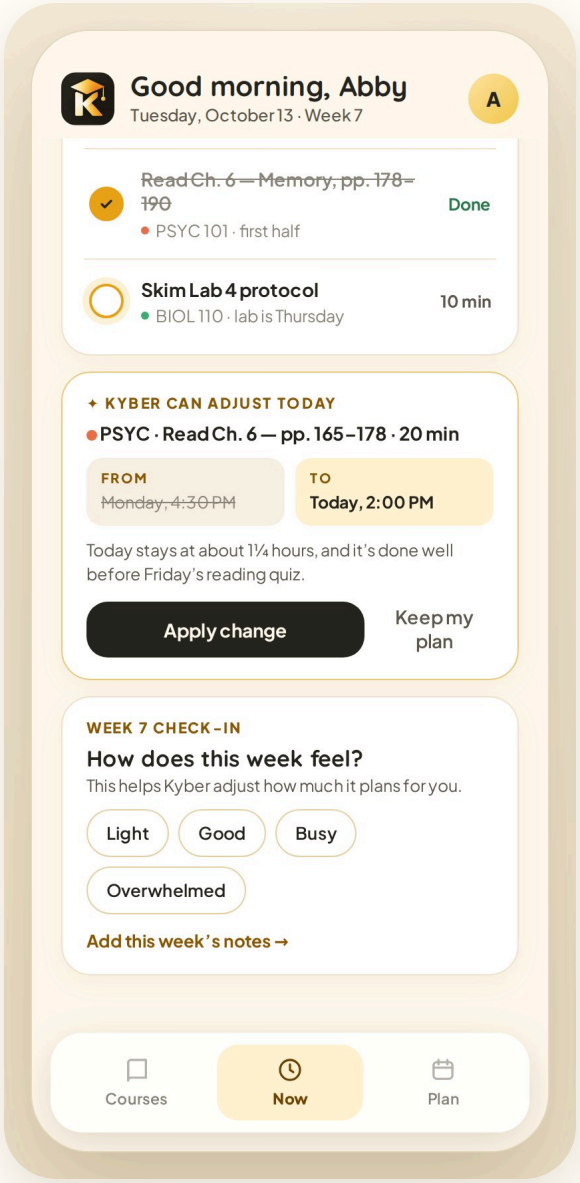

After "Done — check it off"

## WHAT CHANGED

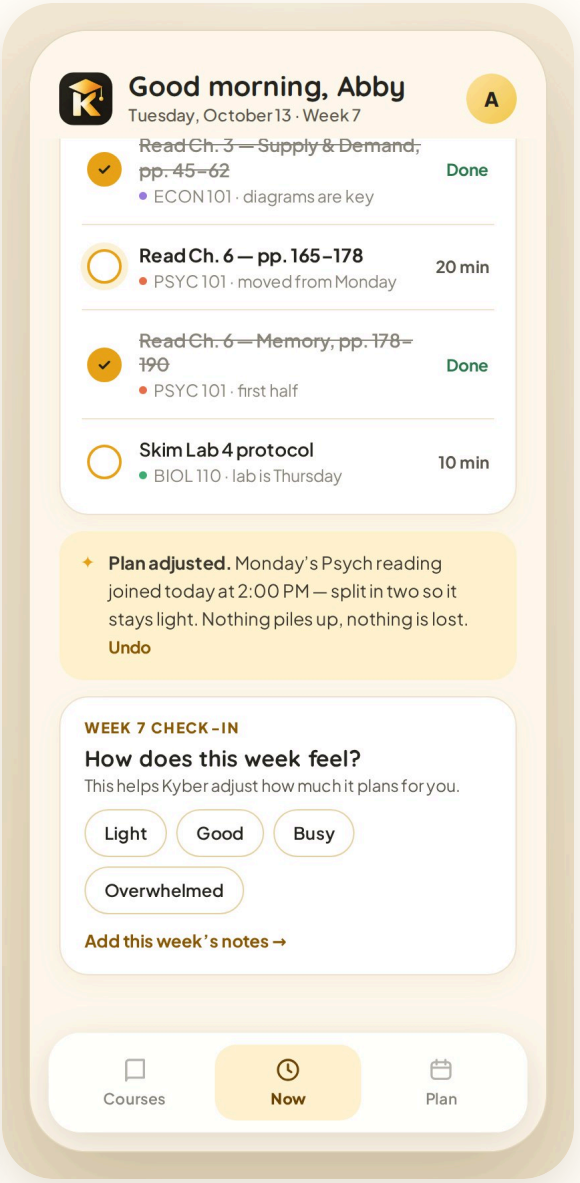

- In Today's plan, "Read Ch. 3 — Supply & Demand" is now checked and struck through. The progress reads "2 of 3".
- The day summary becomes "Nearly there — one thing left · about 10 minutes".
- The **Up next** hero moves on to the first incomplete task: "Skim Lab 4 protocol · BIOL 110 · 10 min", with the why-line "Ten minutes now makes Thursday's lab — and its pre-lab quiz — easy." and the button "Start · 10 min".
- Rule: Up next = the first not-done task in today's list. The hero's content crossfades.

PHASE 2 — NOW TAB

# 21 “I missed yesterday” — propose, then adjust

Proposal, before anything changes

After “Apply change”

## WHAT HAPPENS

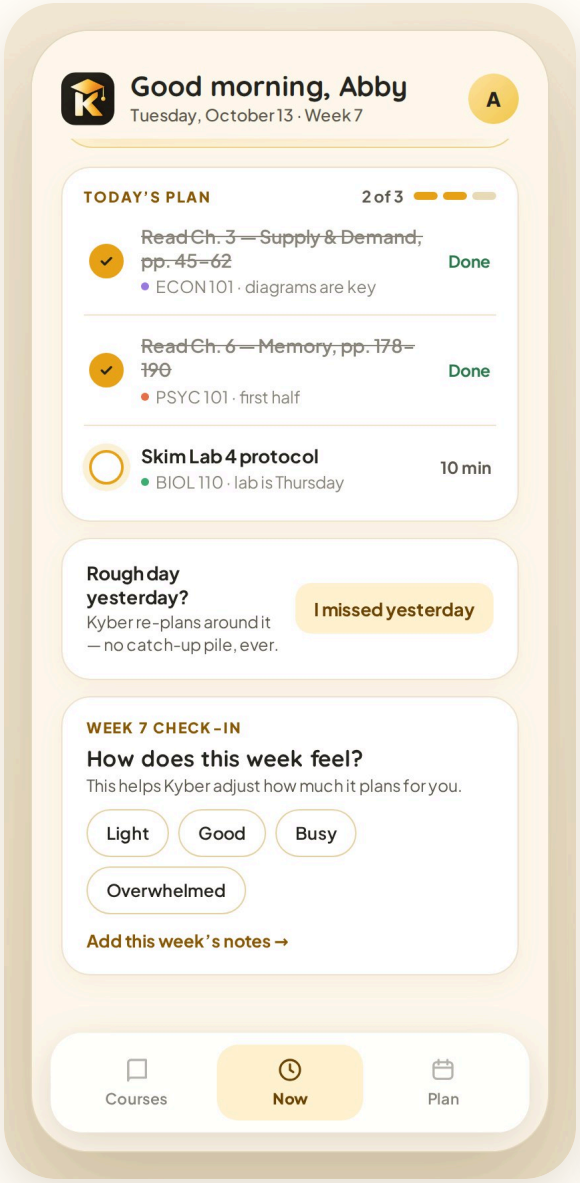

- Tapping **I missed yesterday** shows a proposal first and changes nothing yet. The card reads “✦ KYBER CAN ADJUST TODAY” with the task (PSYC · Read Ch. 6 — pp. 165–178 · 20 min), **FROM** “Monday, 4:30 PM” (struck through) and **TO** “Today, 2:00 PM”.
- The reason sits under it: “Today stays at about 1¼ hours, and it’s done well before Friday’s reading quiz.”
- Buttons: **Apply change** (charcoal) and **Keep my plan** (text).
- After Apply, the task is inserted into Today’s plan and Up next switches to it, with the why-line “Monday’s reading, rehomed — it fits before this afternoon’s lecture and nothing piles up.” A toast says “✦ Plan adjusted”.
- Lower down, the card becomes a yellow note: “**Plan adjusted.** Monday’s Psych reading joined today at 2:00 PM — split in two so it stays light. Nothing piles up, nothing is lost.” It has an **Undo** link.

## CHANGED FROM V1

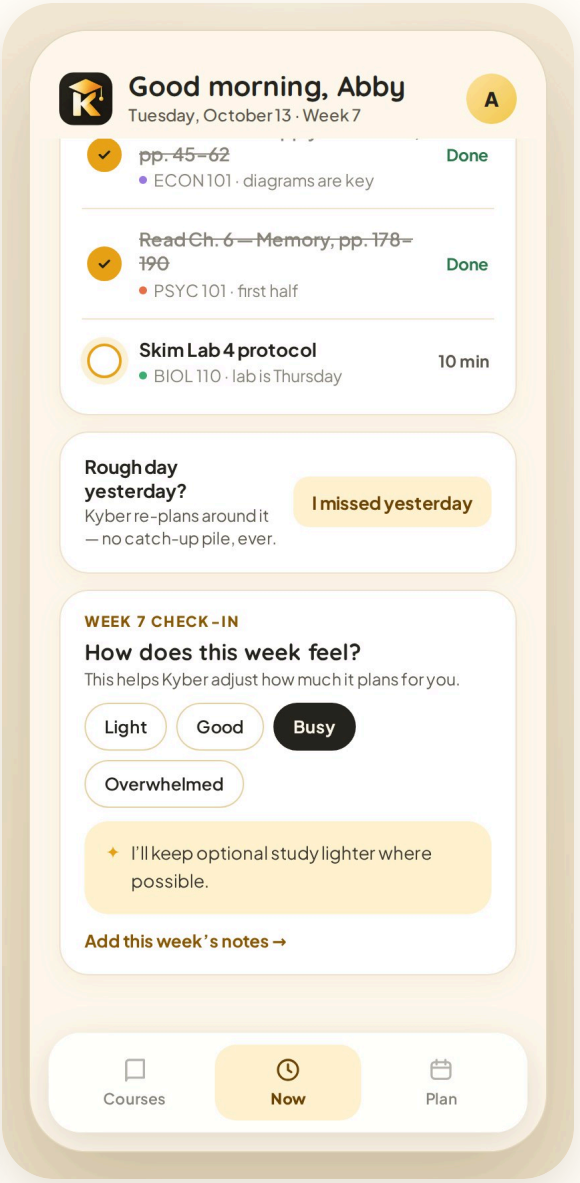

v1 moved the task straight away. Kyber now always shows the change before applying it, the same way the desktop app’s “Rebalance week” works. The student decides.

PHASE 2 — NOW TAB

# 22 Week 7 check-in — how does this week feel?

Check-in card

"Busy" selected

## ON SCREEN

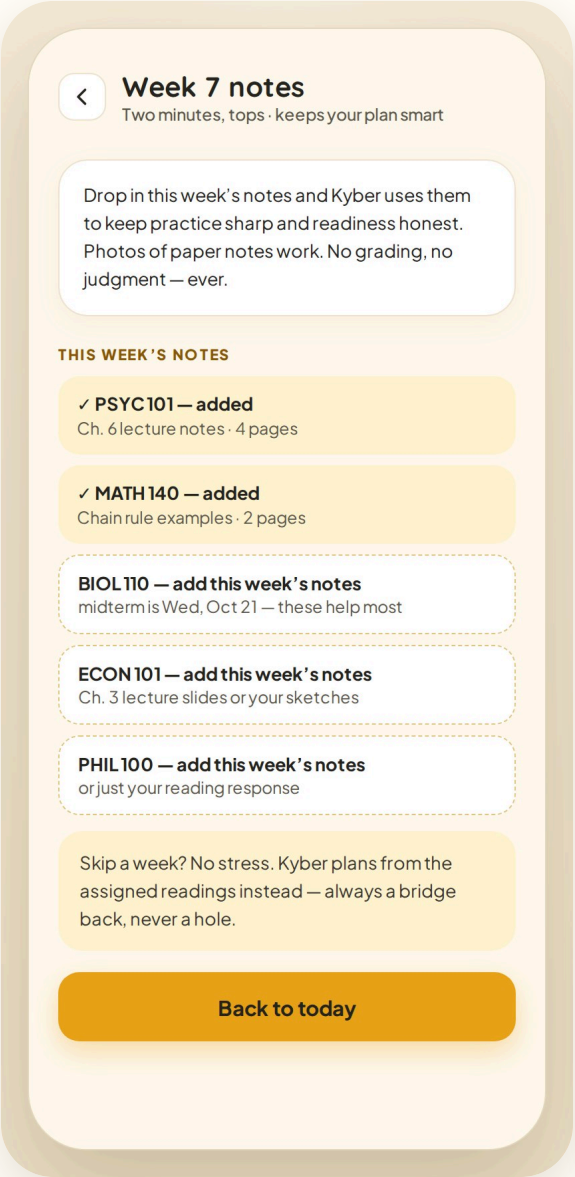

- A card at the bottom of Now: the eyebrow "WEEK 7 CHECK-IN", then "How does this week feel?" (Quicksand 17), and "This helps Kyber adjust how much it plans for you."
- Four pill chips: **Light · Good · Busy · Overwhelmed**. The selected chip is charcoal with cream text; tapping it again clears it.
- A reply appears in a yellow note (with chipIn):
- Light: "You have some breathing room. I'll keep it that way unless something changes."
- Good: "Your current plan looks manageable."
- Busy: "I'll keep optional study lighter where possible."
- Overwhelmed: "I'll prioritize what's essential and protect your open time."
- Link: **Add this week's notes** → (step 23).

## CHANGED FROM V1

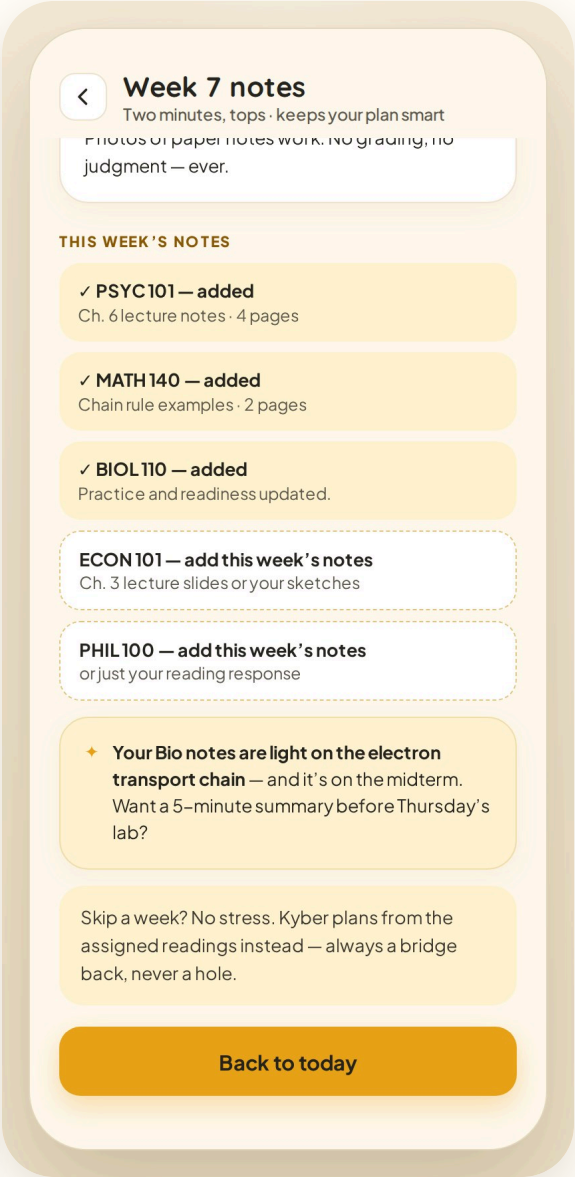

This replaces the old "Check in" button card, and matches the desktop app word for word. The notes upload is still there, one tap away.

PHASE 2 — NOW TAB

# 23 Week 7 notes

Opened

After tapping BIOL 110

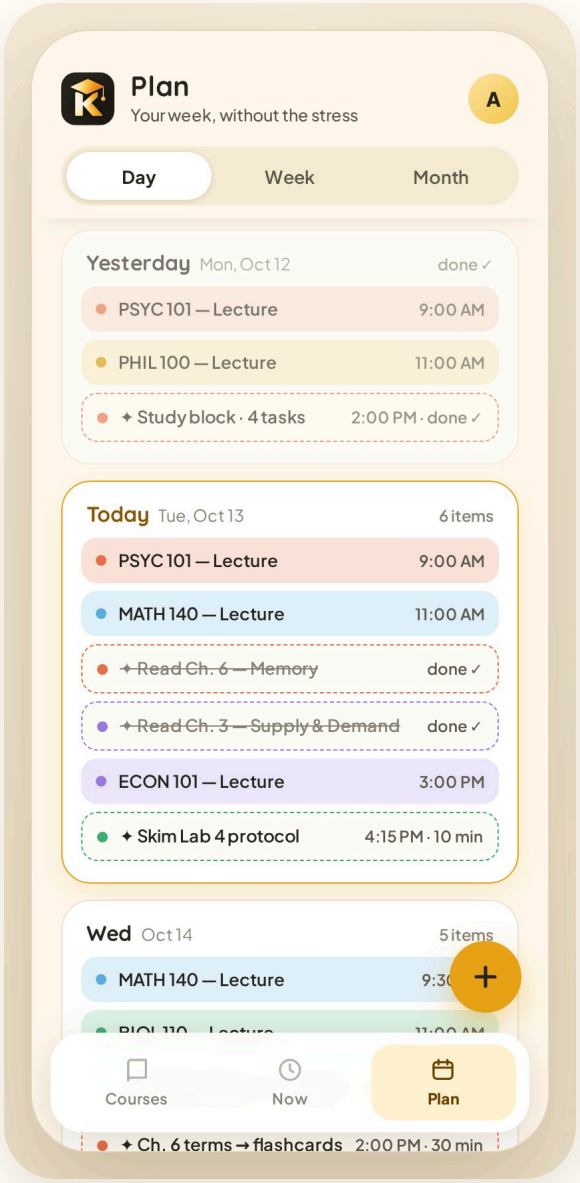

## ON SCREEN

- Header: back button, "Week 7 notes", "Two minutes, tops · keeps your plan smart". The tab bar is hidden.
- Intro card: "Drop in this week's notes and Kyber uses them to keep practice sharp and readiness honest. Photos of paper notes work. No grading, no judgment — ever."
- **THIS WEEK'S NOTES**: one row per course. Done rows use a yellow-soft fill ("✓ PSYC 101 — added · Ch. 6 lecture notes · 4 pages"). Pending rows are white with a 1.5 pt dashed amber border ("BIOL 110 — add this week's notes · midterm is Wed, Oct 21 — these help most").
- After BIOL is added, an insight card appears (soft-amber fill, ✦): "**Your Bio notes are light on the electron transport chain** — and it's on the midterm. Want a 5-minute summary before Thursday's lab?"
- A yellow reassurance note: "Skip a week? No stress. Kyber plans from the assigned readings instead — always a bridge back, never a hole." Then the primary button **Back to today**.

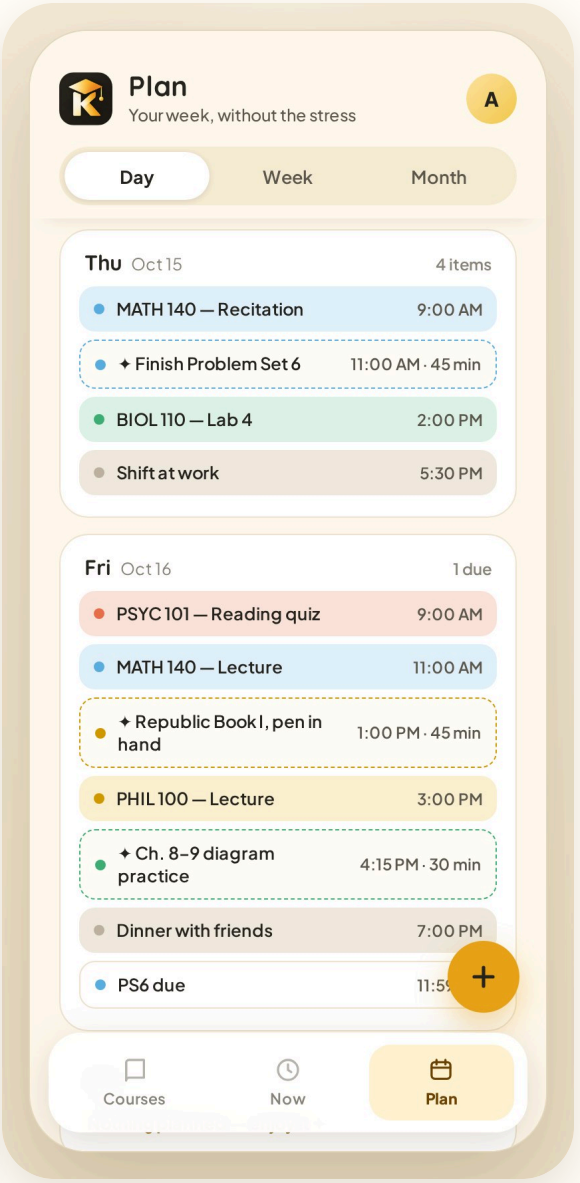

## INTERACTION

Tap a pending row and it turns into a done row: "✓ BIOL 110 — added · Practice and readiness updated." In Swift, open PhotosPicker or the document scanner, then mark the row done.

# 24 Plan — Day view

Top (Yesterday + Today)

Scrolled: Thu – Sun

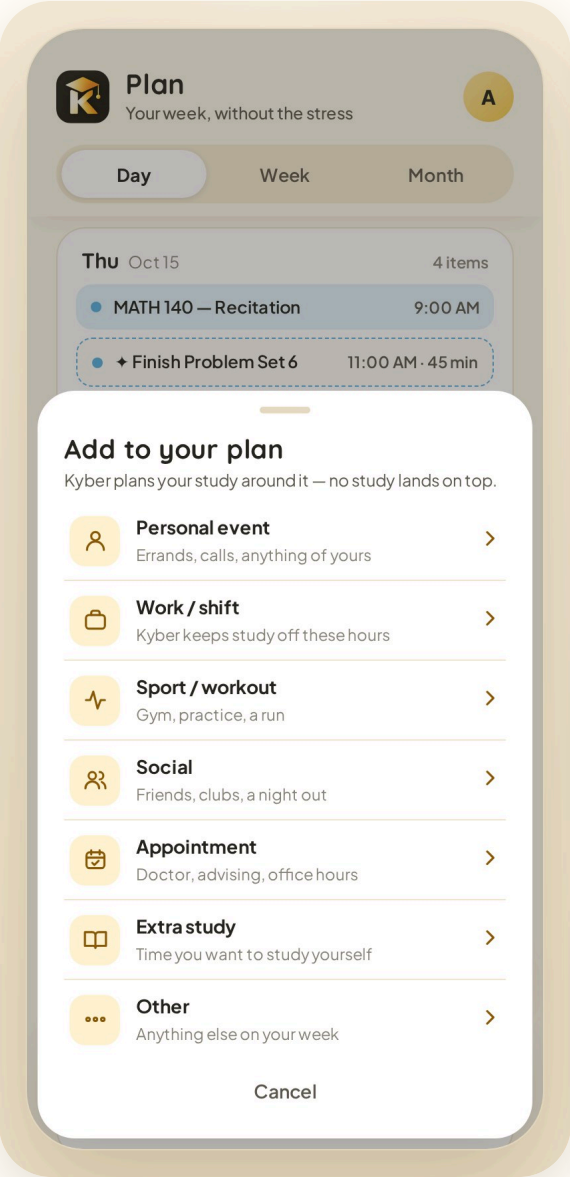

## ON SCREEN

- Header: “Plan” with “Your week, without the stress”. Segmented control: **Day | Week | Month**. Day is the default on the phone.
- A vertical list of day cards (white, radius 22). **Yesterday** (Mon, Oct 12) is faded to 62% and marked “done ✓”. **Today** has a 1.5 pt amber border with a soft glow, an amber-ink “Today” label and an “N items” count. Later days show a count, or “N due” when there’s a deadline. Sat and Sun read “Nothing planned — enjoy it ✦”.
- Four item styles: **class** = course tint fill with a coloured dot. **Kyber study** = white, with a 1.5 pt dashed border in the course colour and a ✦. **Personal** = warm grey (#EFE9DE). **Deadline** = white with a 1 pt border.
- A 54 pt amber **+** button (charcoal plus) floats bottom-right, above the tab bar.

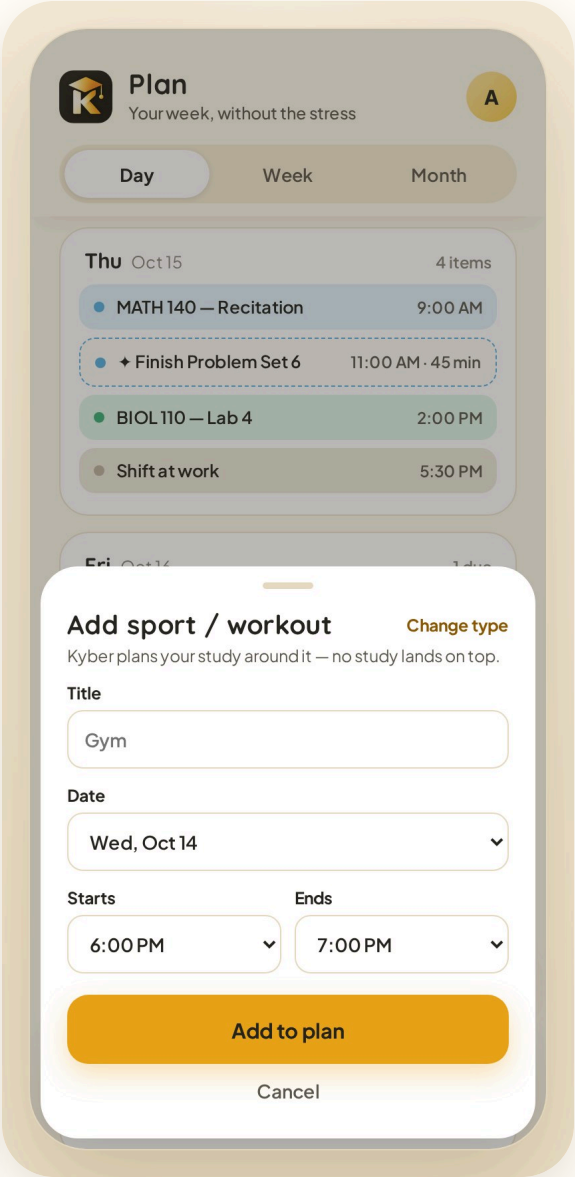

## BEHAVIOR

- When the tab opens, the list auto-scrolls so Today is at the top. Use ScrollViewReader.scrollTo("today", anchor: .top).
- Tap a Kyber study item to open the Summary (steps 18–19). Tap BIOL Lab 4 for the class sheet (step 28). Tap Monday’s study block for the block sheet (step 29). Tap **+** for the Add sheet (step 25).

# 25 Add to your plan — sheet and form

Choose a type

After choosing “Sport / workout”

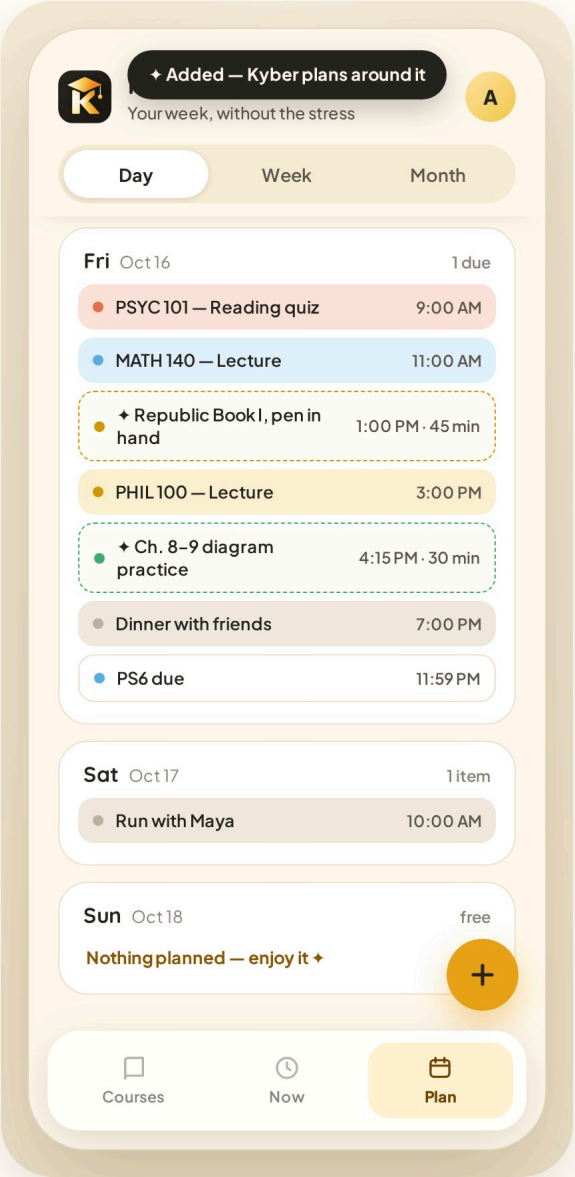

## ON SCREEN

- The backdrop dims (charcoal at 32%). A white sheet (radius 28, inset 8 pt, grab handle) slides up with **sheetUp**: translateY +60% → 0 and opacity 0 → 1 over 0.32 s.
- Title “Add to your plan”, with “Kyber plans your study around it — no study lands on top.”
- Seven rows, each with a 38 pt soft-amber icon tile (line icon), a bold title, a faint hint and a chevron: Personal event · Work / shift · Sport / workout · Social · Appointment · Extra study · Other. The same seven types as the desktop app.
- Choosing a type swaps the sheet to a short form: Title, Date, Starts / Ends, a **Change type** link, the primary **Add to plan** button and Cancel.

## CHANGED FROM V1

v1’s rows closed the sheet and had no form. The emoji tiles are replaced by line icons.

# 26 Added to your plan

A new personal event on Saturday

## WHAT HAPPENS

- The sheet closes, the view returns to Day, and a toast confirms: "✦ Added — Kyber plans around it".
- The new event appears on its day in the personal style (warm grey). Here that's "Run with Maya · 10:00 AM" on Saturday, and the day's count updates to "1 item".

## RULE FOR SWIFT

If a new event overlaps a Kyber study block, Kyber moves the block to the next open slot that day and says so in the toast (e.g. "moved Ch. 8–9 to 5:00 PM to make room"). The desktop prototype does this. On the phone prototype, only the no-conflict case is shown.

# 27 Plan — Week view

Week 7

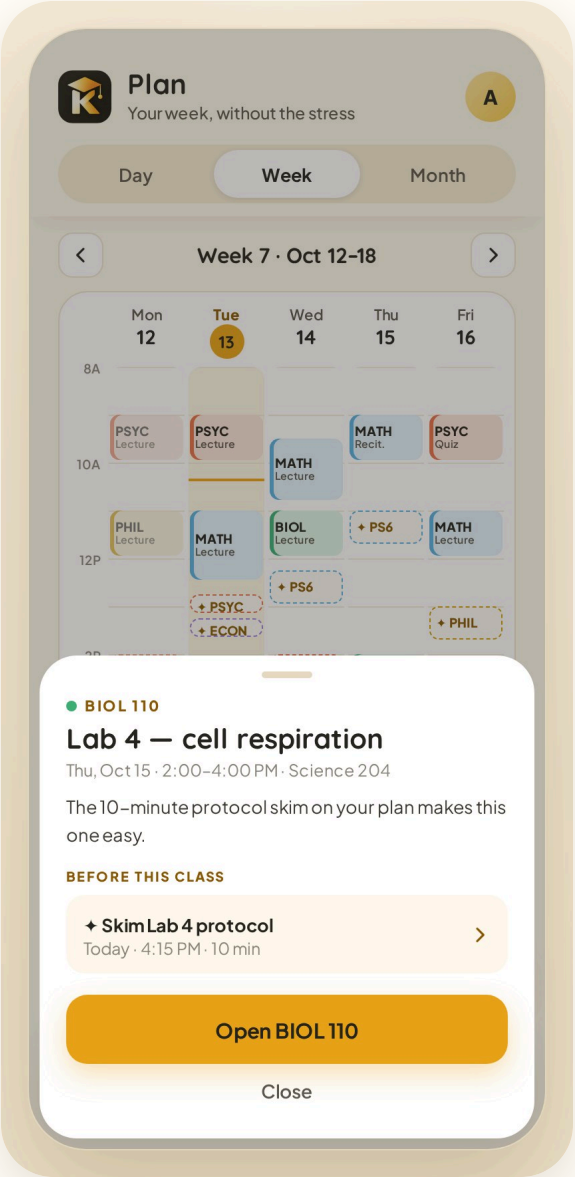

## ON SCREEN

- A week switcher row: ‹ button · "Week 7 · Oct 12–18" (Quicksand 16) · › button.
- A time grid inside a white card (radius 22). Hour labels run 8 AM → 8 PM on the left; there are 5 day columns (Mon 12 – Fri 16). Today's column (Tue 13) has an amber date circle, a warm fill and an amber "now" line.
- Blocks are placed by start time and duration. **Classes** have a tinted fill with a 3 pt left bar in the course colour. **Kyber study** blocks are white with a dashed course-colour border and a ✦. **Personal** blocks are warm grey. Monday is faded because it's past.
- A legend under the grid (Class · Kyber study · Personal), and the hint "Tap any block to see what it covers — and why it's there."

## INTERACTION

- Tap a class for the detail sheet (step 28). Tap Monday's "✓ Study · 4 tasks" for the block sheet (step 29). Tap a Kyber study block for its Summary.
- The ‹ › arrows page weeks. In the prototype they show which week would load.

# 28 Week — class detail sheet

Tapped Thu “BIOL Lab 4”

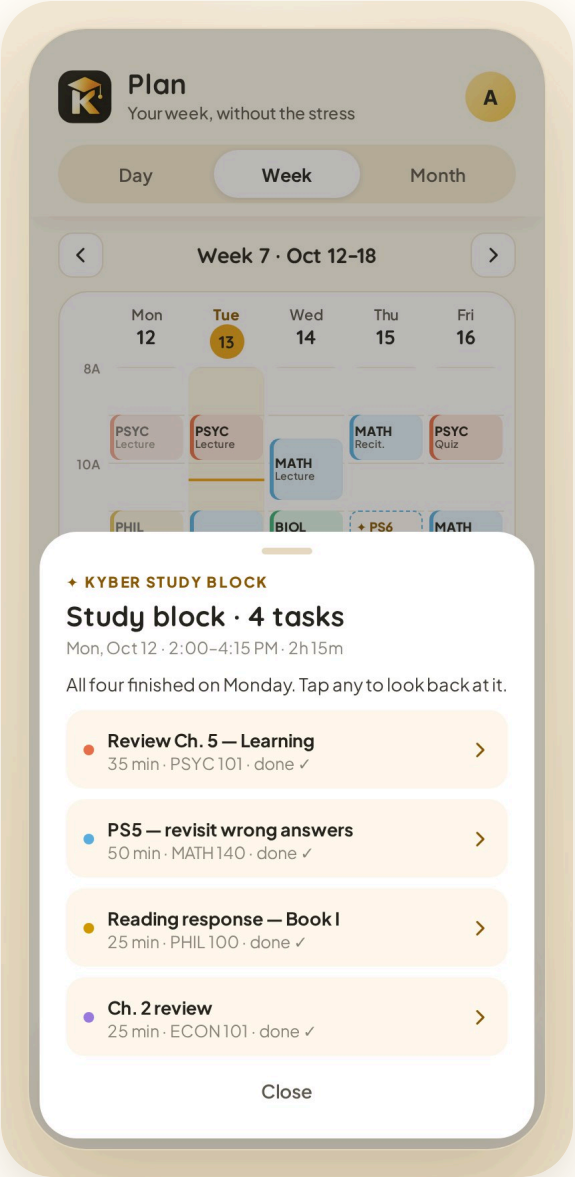

## ON SCREEN

- A bottom sheet: the course eyebrow (BIOL 110 with its dot), the title “Lab 4 — cell respiration” (Quicksand 21), and the meta “Thu, Oct 15 · 2:00–4:00 PM · Science 204”.
- The description: “The 10–minute protocol skim on your plan makes this one easy.”
- **BEFORE THIS CLASS**: a link row to the prep task, “✦ Skim Lab 4 protocol · Today · 4:15 PM · 10 min”. It shows “Done ✓” once finished.
- Primary **Open BIOL 110** and a text button **Close**.

## INTERACTION

- **Open BIOL 110** closes the sheet, switches to Courses, expands BIOL 110 and scrolls it into view. v1 only switched tabs.
- Close, or tapping the backdrop, dismisses the sheet.

# 29 Week — study block sheet

Tapped Mon “Study · 4 tasks”

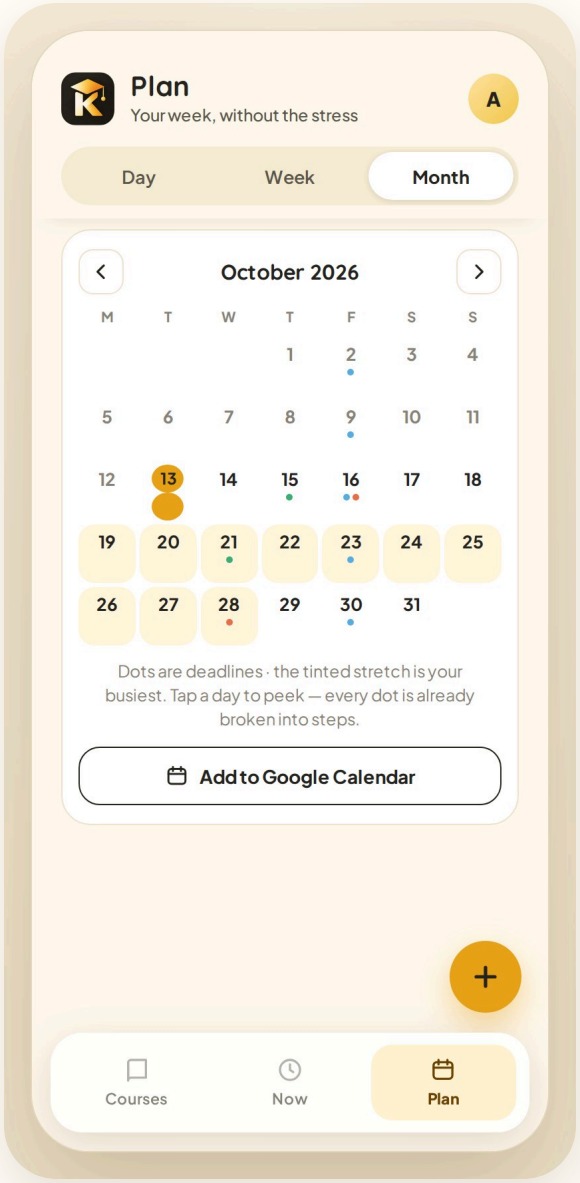

## ON SCREEN

- “✦ KYBER STUDY BLOCK” eyebrow, the title “Study block · 4 tasks”, and “Mon, Oct 12 · 2:00–4:15 PM · 2h 15m”.
- “All four finished on Monday. Tap any to look back at it.”
- Four tappable rows (cream fill, radius 14, course dot, amber-ink chevron): Review Ch. 5 — Learning · 35 min · PSYC 101 · PS5 — revisit wrong answers · 50 min · MATH 140 · Reading response — Book I · 25 min · PHIL 100 · Ch. 2 review · 25 min · ECON 101. Each reads “done ✓”.
- A “Close” text button.

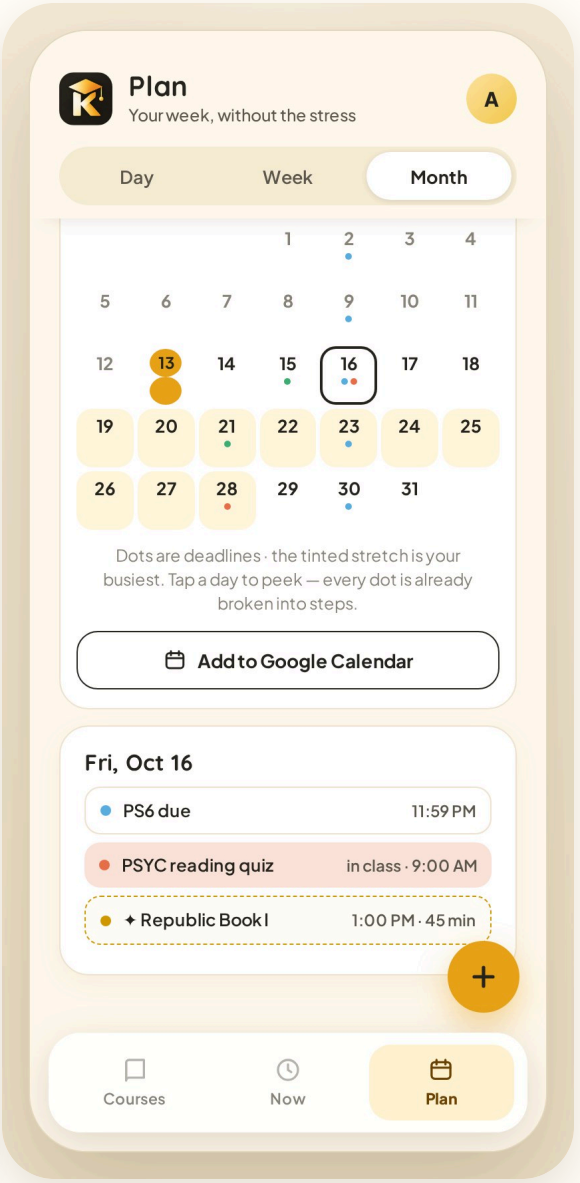

## INTERACTION

Each row opens that task’s Summary. Close dismisses the sheet.

# 30 Plan — Month view

Default

Tapped Oct 16

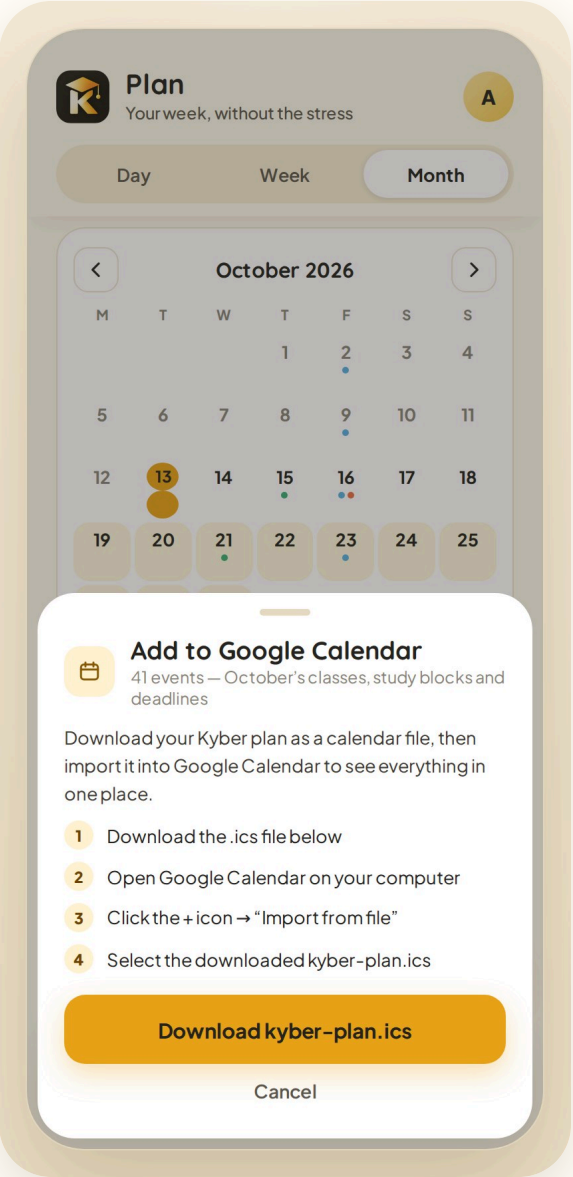

## ON SCREEN

- Inside a white card: a month switcher (‹ “October 2026” ›) and an M–S grid. Days with deadlines get 1–2 small dots under the number, in course colours. Today (13) is a filled amber circle. Past days are faded.
- The busiest stretch (Oct 19–28, both midterms) has a soft-yellow tint, so the student can see it coming.
- Hint: “Dots are deadlines · the tinted stretch is your busiest. Tap a day to peek — every dot is already broken into steps.”
- An outlined button with a calendar icon: **Add to Google Calendar**.

## INTERACTION

- Tap a day to outline it in charcoal. A “day peek” card fades in below with that day’s items. For example, Fri, Oct 16: PS6 due · 11:59 PM, PSYC reading quiz · in class 9:00 AM, and ✦ Republic Book I · 1:00 PM · 45 min.
- The month arrows page months. **Add to Google Calendar** opens step 31.

# 31 Add to Google Calendar — export sheet

Export sheet

## ON SCREEN

- Sheet header: a soft-amber calendar tile, "Add to Google Calendar", and "41 events — October's classes, study blocks and deadlines".
- Body: "Download your Kyber plan as a calendar file, then import it into Google Calendar to see everything in one place."
- Numbered steps (soft-amber number badges): 1 Download the .ics file below · 2 Open Google Calendar on your computer · 3 Click the + icon → "Import from file" · 4 Select the downloaded kyber-plan.ics.
- Primary **Download kyber-plan.ics** and a text button **Cancel**.

## PROTOTYPE

The phone prototype really downloads a small sample .ics with this week's key events, and the toast says it's a sample.

## SWIFT RECOMMENDATION

On iOS, skip the .ics download. Use **EventKit** (EKEventStore, request full access) to write the events straight into the student's calendar, or offer a ShareLink with a generated .ics file.

APPENDIX

# A. Design tokens & components

## COLOURS

| | | |
|---|---|---|
| cream | #FFF9ED | app background |
| cream-deep | #F8F1E3 | disclosure rows, table fills |
| paper | #FFFFFF | cards and sheets |
| ink (charcoal) | #27251F | primary text, selected chips, dark buttons |
| ink2 | #3E3A33 | body copy on tinted panels |
| muted | #5E594E | secondary text |
| faint | #8A857A | meta, timestamps |
| line | #EFE4CF | card borders |
| line2 | #F1E6D2 | dividers inside cards |
| track | #F6EBD3 | segmented track, readiness track |
| amber | #E9A319 | the one primary action, rings, FAB |
| amber-hover | #D89210 | pressed primary |
| amber-ink | #8A5A06 | eyebrows, countdowns, links |
| amber-deep | #6E4504 | active tab label, soft-button text |
| soft | #FFF3D2 | active tab pill, tags, soft buttons |
| yellow / yellow-soft | #F2C94C / #FFF4CF | glow · reassurance notes |
| green | #2E7A50 | "done" text only |

## COURSE COLOURS (DOT · CALENDAR TINT)

| | | |
|---|---|---|
| PSYC | #E8704A | #FBE3D9 |
| MATH | #5AAEE0 | #E1F1FB |
| BIOL | #3FAF76 | #DDF3E7 |
| ECON | #9B7BE0 | #ECE6FB |
| PHIL | #D19A00 | #FBF0CF |

Grade-breakdown segments, in order: #E8704A · #E9A319 · #83CFFF · #B392FF.

## TYPOGRAPHY

- **Quicksand** (display) 500–700: screen titles 21, onboarding H1 30, card titles 16.5–18, countdowns 34, calculator 50, stat numbers 28–34.
- **Plus Jakarta Sans** (body) 400–800: body 13.5–15, meta 12–12.5, eyebrows 11 heavy, uppercase, tracked 0.12em in amber-ink.
- Bundle both as TTFs in Xcode. SF Pro is the fallback.

## CORNER RADII

Phone 44 · cards 22 · hero 24 · sheet 28 · tab bar 24 · buttons 16 · exam box / notes 18 · chips 14 · tags 10 · pills 999.

## COMPONENTS

- **.card**: white, 1 pt #EFE4CF border, radius 22, padding 16/18, warm shadow 0 6 20 rgba(154,98,6,.06).
- **.hero**: gradient #FFF1C9 → #FFF7E2 → #FFFBF2, 1.5 pt #F0D68E border, radius 24, radial yellow glow top right.
- **.ring**: 26 pt circle, 2.5 pt amber border. Done: amber fill with a charcoal ✓. Up next: a 5 pt soft-yellow halo.
- **.btn.primary**: amber, charcoal 15.5 bold, radius 16, 52 tall, glow 0 8 20 amber at 32%. **.dark**: charcoal with cream text, for confirming a proposed change.
- **.calm**: yellow-soft #FFF4CF, radius 18. Used for reassurance and Kyber replies.
- **Toast**: charcoal pill, top centre, 2.6 s, text starts with ✦.

## MOTION

```
chipIn    0.45 s ease   opacity 0→1, y +10→0
floaty    2.6 s loop    y 0 → −7 → 0 (processing icon)
sheetUp   0.32 s        y +60% → 0, opacity 0→1
bar       0.35 s ease   readiness width
hover     0.2 s ease    dropzone border / fill
chips     every 260 ms  ·  rows every 560 ms  ·  reveal at 4,620 ms
```

Segment and tab switches have no transition. Content swaps instantly.

APPENDIX

# B. Data model & state

## SUGGESTED SWIFT MODELS

```
struct Course { id, code, name, color, tint,
  nextAssessment: Assessment, readinessBase: Int,
  weights: [GradeComponent], syllabusFacts: [(String,String)],
  weeklyAdvice: String, plan: [PlanStep], insights: [Insight] }
struct Assessment { kind (exam/essay), title, date, weight }
struct GradeComponent { name, weight, projected: Double }
struct Task { id, title, courseID, minutes, hint, why,
  date, start, isDone, movedFrom?, guide?, summary? }
struct CalendarItem { title, courseID?, date, start, end?,
  kind (class/study/personal/deadline), location?, prepTaskID? }
struct Insight { category, title, body }
enum Mood { light, good, busy, overwhelmed }
@Observable final class AppStore { courses, tasks, items,
  hasOnboarded (@AppStorage), selectedTab, mood, missedState }
```

## DERIVED STATE

- **Countdown days** = the assessment date minus today (the demo "today" is Tue, Oct 13, 2026).
- **Up next** = the first incomplete task in today's list.
- **Day summary** = the count and minutes of today's tasks, worded by load (see step 16).
- **Readiness** = base + the prep finished for the next assessment. It only goes up (PSYC: 45 → 57).
- **Projected grade** = Σ weight × projected score. **Required on the biggest part** = ⌈(goal − Σ others) / weight⌉.

## RULES THAT KEEP KYBER CALM

- Any change Kyber makes to the plan is shown first (From / To / Why) and applied only when the student taps Apply. There is always an Undo.
- No streaks, red badges, XP or guilt copy. Falling behind produces a proposal, never a warning.
- Every number on screen has a label or a "How is this calculated?" next to it.
- One amber action per screen. Everything else is text buttons or soft buttons.

## PROTOTYPE LIMITS TO BUILD FOR REAL IN SWIFT

- State lives in memory; a reload restarts onboarding. Persist with SwiftData or @AppStorage.
- Uploads, syllabus reading and notes photos are simulated. The real pipeline needs the parsing backend.
- Week and Month arrows show which week or month would load, but the demo only holds Week 7 and October.
- The Google Calendar file is a 4-event sample. Use EventKit on iOS.
- Adding an event that overlaps a study block should move the block (desktop does this; the phone demo shows the no-conflict case).

APPENDIX

# C. Course content (mock data)

### PSYC 101 · INTRO TO PSYCHOLOGY · #E8704A

- Next: Midterm — Multiple Choice · Wed, Oct 28 · 30% · 15 days · readiness 45% (57% after today's reading)
- Today: Read Ch. 6 — Memory, pp. 178–190 · 25 min
- This week: Start your Ch. 1–3 review — the midterm is Oct 28, two weeks away. (4 steps)
- Weights: Final 35 · Midterm 30 · Weekly quizzes 20 · Participation 15
- Syllabus: Late 10%/day, max 3 · Lowest 2 quizzes dropped · Attendance → participation · 60 MC, no notes
- Kyber noticed: Quizzes are free points · Exams are 65% · Lecture examples beat the textbook · Participation is mostly attendance

### MATH 140 · CALCULUS I · #5AAEE0

- Next: Midterm 2 · Fri, Nov 13 · 25% · 31 days · readiness 30%
- Today: nothing. This week: Stay on top of Problem Set 6. (4 steps)
- Weights: Final 35 · Midterm 2 25 · Midterm 1 20 · Problem sets 20
- Syllabus: Late PS 20%/day, max 2 · Lowest PS dropped · No calculators on exams · Collaboration OK on PS, not exams
- Kyber noticed: PS are 20% and prep the exam · Final worth more than both midterms · Show your work · No calculators, so fluency is the skill

### BIOL 110 · INTRO BIOLOGY · #3FAF76

- Next: Midterm — Multiple Choice · Wed, Oct 21 · 20% · 8 days · readiness 60%
- Today: Skim Lab 4 protocol · 10 min. This week: Final push before Oct 21 — diagrams and Ch. 8–9. (2 steps)
- Weights: Final 30 · Lab reports 25 · Midterm 20 · Participation 15
- Syllabus: Late labs not accepted · Pre-lab ≥ 60% to enter · Reports due within 1 week · 50 MC + 2 short answer, open notes
- Kyber noticed: Skim the pre-lab · Labs + final = 55% · Diagrams on every exam · A missed lab can't be made up

### ECON 101 · INTRO TO ECONOMICS · #9B7BE0

- Next: Midterm — Multiple Choice + Diagrams · Thu, Nov 5 · 30% · 23 days · readiness 20%
- Today: Read Ch. 3 — Supply & Demand, pp. 45–62 · 20 min. This week: Start on Ch. 3 diagrams. (5 steps)
- Weights: Final 40 · Midterm 30 · Problem sets 20 · Participation 10
- Syllabus: Late PS −25%/day, max 2 · PS collaboration with citation · 40 MC + 2 long-answer diagrams · Basic calculator OK
- Kyber noticed: PS build the exam skills · Final is 40% · Sketch diagrams as you read · Ask one question per lecture

### PHIL 100 · INTRO TO PHILOSOPHY · #D19A00

- Next: Midterm Essay — 1,000 words · Tue, Nov 10 · 25% · 28 days · readiness 30% (NEXT ESSAY)
- Today: nothing. This week: Get through Republic Book I, pen in hand. (4 steps)
- Weights: Final essay 35 · Midterm essay 25 · Reading responses 25 · Participation 15
- Syllabus: Late essays −5%/day, max 3 · Responses due midnight Fridays · Word count ±10% · Chicago author-date
- Kyber noticed: Never skip reading responses · Essays are 60% · One claim per paragraph · One question per class

### SEMESTER 2 (WINTER 2027, STARTS MON, JAN 11)

- PSYC 102 · Brain & Behaviour · MATH 141 · Calculus II · CHEM 110 · General Chemistry · ENGL 102 · Composition II · PHIL 200 · Ethics — all "syllabus pending".

### WEEK 7 AT A GLANCE

- Tue 13: PSYC 9:00 · MATH 11:00 · ✦ Ch. 6 12:45 · ✦ Ch. 3 1:15 · ECON 3:00 · ✦ Lab 4 skim 4:15
- Wed 14: MATH 9:30 · BIOL 11:00 · ✦ PS6 12:15 · ✦ Ch. 6 terms 2:00 · Gym 6:00
- Thu 15: MATH rec 9:00 · ✦ Finish PS6 11:00 · BIOL Lab 4 2:00 · Shift 5:30
- Fri 16: PSYC quiz 9:00 · MATH 11:00 · ✦ Book I 1:00 · PHIL 3:00 · ✦ Ch. 8–9 4:15 · Dinner 7:00 · PS6 due 11:59 PM
